Organization: No

Comments:

The time for electric vehicles is NOT now. Why? 1. EV's have not been perfected. Too many catch fire. 2. They are a disaster for the environment: A. Lithium only comes from CHINA where it is mined using very harmful conditions for our environment B. Electric production is much more detrimental to the environment than clean burning gasoline. 3. The infrastructure is not ready. A. There is no way the current electric grid could provide enough energy B. Charging stations are not available in most areas C. Charging time cannot compete with a gas fill up 4. Cost....the vehicle and the home charging station is astronomical. How much is a charge? AND..... Follow the money—who is making money from this push for something that is harmful to the environment!
