This house hold says no to the globalist transfer of wealth being supported and promoted by the wasteful and environmentally destructive resource shifting requirements to produce over priced, unsafe, energy inefficient EVs as well as the infrastructure required to build, maintain and recycle the the chemical and mineral waste outfall.

NO!to mandatory electric vehicles.

For a while longer, this is still America where freedom reigns and rings. For those who want them let them have them and the expense and overhead burden the infrastructure required to keep them on the road.

The government needs to get out of the manufacturing business, its not very good at running thing's efficiently.
