I own the 1st tesla in Delaware, January 2013

New battery cost \$23,000.00

Both my 2012 & 2014 year Tesla's both have needed the batteries replaced.

What happens to the old batteries?

Can't fix yourself.

What do tourist do, who drive a decent part of our economy when they come to Delaware with a gasoline or diesel vehicle and there's no gas stations.

How do we truck in the food & goods to Delaware?

What do people do who can't afford a new electric vehicle when there's no gas stations?

Where are all these charging stations going?

Can our grid handle the extra electricity?

What happens to the convenience, we enjoy from gas stations when they are gone?

Choice is important for the American can do experience.
