Comments:

Major concern over the affordability of installing/upgrading an adequate power outlet(s) for an electrical vehicle(s). I reside in an area where we will probably always have overhead transmission lines along with frequent storm outages. We recently discovered that we don't even have landline phone service when the power is out. FCC de-regulated that communication services be available in emergency situations. So much for that landline we pay for. We have always kept our landline due to our security system along with the fact that we have no cell service or internet service. However we are going to be mandated to power up an electric vehicle. How are the native Sussex Countian's going to be able to afford additional electric usage and these upgrades as their incomes aren't increasing. They can barely afford to live in their hometown, county, or state. How are businesses going to afford to supply charging stations for their employees. Such as Hospitals, Factories, industrial parks, government buildings? Do you get to work and not able to return home ? I guess if I ran out fuel I would have to figure that out, however I wouldn't have to wait a prolonged length of time to fuel my car up with gas, Just my forethoughts.
