Hello I want to voice my opinion against the electric vehicle mandate. We do not have the infrastructure to handle EV's. Wait until consumers see the cost of tire replacement and battery replacement expenses are. How about the long lines to charge your vehicle! What are people that live in an urban environment going to do to charge their vehicles.

I can see the application of hybrid vehicles, but I am totally against an electric vehicle mandate. Why is there such a rush for EV's? Probably to make someone a lot of money. Can you quantify what the effect on the environment that having EV's will have? I know that you can't and are only speculating. I will do my best to vote against people that support the push for EV's.
