Comments:

My comments are more on taking these factors into consideration up on your decision. How they will be addressed or have even been considered. 1) if there now needs a bill to have new housing have an infrastructure for electric vehicles, how will the existing homes be addressed and who will pay for it? 2) How do we ensure that the wealth gap is not further widened for families that can hardly afford their existing vehicle? 3) Will gasoline vehicles continue to be honored and protected so people can still get their gasoline vehicles parts and inspections uninterrupted? 3) How do we ensure the elderly can use an electric car, safely, as technology upgrades are not in their favor. Many I know over 65 today still don't and won't use a smartphone. They have a flip phone and on some cases, do not have text messaging services. 4) What measures will be taken to safely dispose of the batteries in electric cars so that does not place a burden on safe drinking water front the components that sit at the junkyard due to a crash or just wearing out? Just a few things that had come to mind. Thanks for your consideration of my thoughts.
