How does DNREC get the wherewithal and legal authority to mandate the edict that all vehicles sold and registered in DE must be electric vehicles? Have you listened to Rob Book of Delaware Electric Coop at all? How can someone who lives in urban areas without the benefit of a garage with electric get their EV charged at home on city streets? Certainly can't get your EV charged at a filling station right now even if you can find one that has a charging station because they are not working or you have to wait a ridiculous amount of time because someone else is charging their vehicle. It isn't like pumping gas! But of course you already know that, but that isn't your problem, is it? Why not get the infrastructure in place and problems solved before forcing this down every one's throats? Use some common sense! I especially don't like that if a gas powered auto is bought out of state that you won't allow it to be registered in DE. That just reeks of government overstepping their bounds. No one has addressed the big rig trucks and problems with supply chain issues when this is enforced either
