I am against the proposed mandate for E. V. in Delaware.

This is nothing more than a TAKE OVER of another of our freedoms.

There is no planning in place to make this work.

It is a bad idea ! SAY NO !

There is no grid, no ability to produce enough electric etc.

There is no reason to purchase oil from our enemies when we have more than enough to supply us and most of the world.

The US is a market based system. Let the consumer decide.

Why not hydrogen powered cars their emissions are distilled water and Hydrogen as a fuel is limitless.
