Organization: Independent, practicing Architect/Urban Planner-55 years

Comments:

Noting DNREC inability of enforcement since Department outset of 1972, alternate energy means should be immediately engaged. Albeit, for Delaware, the generative sources of off shore wind turbine receive more denial, while solar energy gains headway, this latter mode admits the lacking of reliability and being the fully needed generative source. We must look to the hybrid transition for autos , more nuclear basic source and,--- preserving independent mobility, longer cruise range, ease to refuel, look to on board hydrogen-electric automobiles. Of note, this Architect gained the support of State Senator Winifred Spence (d.) to incorporate within our Coastal towns Summer available mini cars/carts, primarily to cut down heavy traffic and save gas. Auto manufacturers and Highway lobbyists intervened. Long range, our over population is but fractional to cause of global warming. We are into a repeat cyclical global warming.. Coastal flooding shall re occur and with construction we are NOT abiding to FEMA strong recommendations. Charlie weymouth 302-658-8760
