Comments:

I do not think the infrastructure is built to make this a reality. The infrastructure should be in place prior to banning gas powered vehicles. Other technologies should be considered such as hydrogen, nitrogen or biodiesel fuels automobiles. Gas powered hybrid cars should also be considered. The cost of EVs is another huge barrier to making this technology a reality. The additional cost places a major burden on low and middle income families. Brazil has utilized hydrous alcohol (E100) or on gasohol (E25 blend), as the mixture of 25% anhydrous ethanol with gasoline. This technology seems very promising why doesn't Delaware think independently from the state of California.
