

Electric Vehicles - Horrible situation number 2:

The suggested mandate about Electric Vehicles is wrong on so many levels. I have provided many of the problems associated with a forced mandate on something that just will not work.

I related how a state employee cannot do his job while trying to use an EV. I provided a listing of 20 reasons why it won't work. I provided pictures of fires caused. I had a picture where a person had to haul a generator in a pick-up to charge EV.

My suggestion and hope is that the mandate should be trashed. Being like California is not a good thing.

Further, there is an article in the national news about a fight brewing in DC against the idea. Please spare the people in Delaware both the time in combating this idea and the hardships of having to deal with a mandate. I have added the national article.
