Why would any Delaware committee follow the lead of California's legislature? California governor asks residents to not charge EV's due to load on the electrical grid. This seems to be a case of California legislature knew better. How did Delaware's Bloom Energy contract work out? Residents told that the surcharge will not exceed \$1.25 per month for the length of the contract. Residents have now paid double and triple that amount for 21 years thanks to governor Markel and Delaware's legislature. The EV's mandate is similar. EV cars that are not affordable by most people and elimination of gas cars that are affordable by government mandate. Let the market place show the way with reason. We will get there.

Sincerely John Gerber
