I am not in favor of mandating EV. They are more expensive, impossible to repair if in an accident and the batteries are made in China. What do we do with the old batteries. Additional expense for the charging station in your garage. What if you don't have a garage and live in one of the many townhouse or apartment building going up in Sussex county. What about a State of Emergency if one comes up, evacuation becomes more of a challenge.

I think mandating this is a horrible idea. Please do not put any more pressure on the working people of your state. They are having a hard enough time finding housing in Sussex County they can afford.

Use your power for good. Mandate the builders to pay more for developing the farmlands of Sussex County. They make their money and do not have to contend with crowded roads, new schools and the additional costs, new fire stations and EMT's, Ground water run off and poorly planned storm water management ponds. Breeding ground for mosquitoes.

Say NO to mandating EV for our state.

Thank you...
