I am opposed to the EV Mandate based on the principle of unconstitutional Government Mandates I have nothing against EV's or alternative energy only when being forced upon the public when it should be the market forces driving the new technology through private enterprise and innovations as it has in the past ! Government and it's agencies do nothing but create more problems than they solve hence setting unrealistic dates through a mandate seems to me as a fools errand. The question remains is; What will be the overall costs for the public and what is the criteria for the future sustainability and what will power the needed energy for our state's grid? POINT: Solar and wind is not a proven reliable source compared to fossil fuels etc IMO the technology is not there yet however Natural Gas and Nuclear is the way to go until we develop better technology for our state's grid.
