Comments:

It is the responsibility and duty of the legislative body in the state of Delaware to make regulations that affect the people. Regulations should not be made by nominated people in state agencies. The effect that electric vehicles will have on the citizens of Delaware include, but are not limited to financial hardships and the ability for distance travel. I cannot imagine that a company that does over the road trucking to deliver goods will be able to continue making deliveries in a timely manner when they have to spend more than a few minutes to be sure the vehicle will be able to get to the destination due to the lack of charging stations, the number of charging stations available on the route, and the length of time it may take to charge a large vehicle. Additional regulations are not appropriate and take away from the citizens of Delaware. The ability to decide what is best for them and their family. It is certainly in my opinion government overreach. This is not a good plan for the state of Delaware or our country either.
