2022-R-A-0011: Low Emission Vehicle Program

What is your name? Nancy Weiland

Are you a resident of Delaware? (Check one)

Yes No

Please provide your home zip code: 19968

Are you offering your comments as an individual citizen, or do you represent an organization? (Check one)

Individual Organization (Please provide the organization's name.)

Do you support or oppose the proposed Low Emission Vehicle Program, which seeks to restrict and eventually eliminate the sale of new gasoline and diesel-powered cars, light trucks, and SUVs in Delaware? (Check one)

Support Oppose

Do you wish to offer additional comments in support of your position?
(Comments can be continued on the back of this document.)

Batteries way too expensive! Batteries can catch on fire -
I know someone this happened too!! Dangerous!! The whole
system is electric & if in the car you can't escape unless
you break a window to get out!

They are way too expensive to buy & the batteries are about
almost 1/2 the cost of the car! These batteries are large
heavy & more land fill waste - toxic! Can't drive enough
miles like a gas vehicle before a charge, which takes much

(over) →

longer than filling your tank with gas. I don't have time like many others to sit & wait for a charge when on long road trips.

You are forcing homeowners to have their garages wired for these charging outlets which is more expense & a higher demand on our DE electric supply.

If black outs or natural disaster you won't have electric to charge your car!

I read where if you lived in a Condo or apartment complex with garages they won't allow charging stations to be put in the garages. Most likely liability if one catches fire!

I could go on & on. Bottom line - We are Not California but a Small state of DE. I don't think our air quality in DE even comes close to Calif. Maybe you should think of how much all the planes flying above this state & their Chem trails are polluting & all the Crop dusting planes spilling out Chemicals - All this is far worse for our environment than gasoline powered cars that have been around for years. You should be working for & with the people - Not against the majority who don't want EV's.

* there will be an eternal answer on judgement day for all of us on things done in this life on earth. No one will escape! How will you answer? Think on these things! *
