Comments:

The state of Delaware is not prepared to take on this mandate. We don't have the electrical Grid. In the summer we have to watch our electric air conditioners, so we don't overload the grid Most homes own more than one car. It makes traveling more difficult. Where do we dispose of the toxic batteries that no one seems to discuss. Cost of replacing batteries would make a hardship on consumers. Added expense to car owners. Automotive companies would be overburdened Trucks and heavy equipment cannot function correctly. Wouldn't it be wiser to watch the other states. See what they encounter and then decide on our next move? I could go on and on. By the way did I say I own battery car? It is wise to watch others make mistakes then learn from their mistakes. Technology is moving in a fast pace. by tomorrow it will be obsolete
