RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

I believe people should have a choice. The reality is it will be almost impossible for people living in cities where the only option for parking is street parking to charge their vehicles. The vehicles themselves are dangerous when damaged because of the rechargeable batteries and will add extensive additional work for people like firefighters and tow truck drivers because of protocols that need to be followed in the vehicle is in an accident or needs towed. The power grid can not handle the implementation of only zero emission vehicles.

Sincerely,
Kelly Eckman

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

In southern Delaware public transportation is very limited and people need affordable vehicles to be able to go to work, etc. So far electric vehicles are not affordable for the average person when factoring in the cost of the vehicle and the cost to install chargers at home and the cost of electricity to charge the vehicle. I also question if the power grids can even handle all the additional electric to be used for the charging. For the most part that electric will still be generated using fossil fuels. There are too many things to be considered in making Delawareans go with all electric vehicles and I don't feel Delaware is there yet.

Sincerely,
Nancy Smith

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

Let the market drive this change. There are so many concerns, from economics with lower income people, electric vehicles life cycle not being “environmentally” sound and logistics and costs of charging stations at the many different types of residences, to name a few. Tax credits for buying electric vehicles does nothing to help someone buy a car at POS. I’m considering a hybrid for my next vehicle, so don’t get the wrong idea. It’s not time yet to go with such a mandate. There needs more growth and innovation around non fossil fuel vehicles.

Sincerely,
Beverly Wiles

I am writing to state that I Oppose the proposed regulation referenced above.

The people supporting this mandate need to look toward the future complications. The power company can not produce enough power for summer draws. The batteries only last about ten year, where are they going to dispose of them. When you inadvertently run out of power, you cannot just walk and buy a bag of bolts. Do your homework, please.

Sincerely,
Tom Irwin

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

I feel the mandate is first of all unconstitutional due to restriction of trade. Also it not only hurts local businesses, it will increase costs to consumers that are currently struggling with increasing inflation. As a small business owner that has 5 vehicles on the road, the increased cost or having to replace our vehicles will cause an undue drain to our bottom line. The cost to replace the batteries after a few years will be externally burdensome. This mandate needs to be rethought and put on hold until such time that other alternatives can be found. Our power infrastructure is not ready to handle the burden. Please reconsider.

Sincerely,
Mike Gray

I am writing to state that I Oppose the proposed regulation referenced above.

EV's have a place in the market, but like anything else, they have their draw backs. Aside from being fire hazards in enclosed spaces; they are expensive to dispose of, the process to break down the batteries is dangerous, and when accidents do happen, they take hours to extinguish fires. I adamantly oppose this mandate.

The United States constitution is based on freedom. Not mandates from government. The race for zero emissions will be the end of the USA. Look at the energy prices in EU! Energy resources propelled the USA to the most prosperous nation in the World. Do not Mandate Electric vehicles! China owns the majority Global Rare Earth Minerals for lithium battery production. We can NOT be dependent on China for energy. USA used to be a surplus net exporter of energy and now we are not. US energy fueled the Industrial Revolution which enabled us to become the superpower we are and soon not to be. The US electric grid can NOT handle the proposed electric mandates that are being proposed.

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

This mandate will increase the cost of transportation in DE by raising the costs of vehicles in DE. Delawareans are having a hard time with inflationary prices right now. We don't need to give Delawareans higher prices with a DNREC mandate. Run this by the legislature and let the people's reps that they have voted for, weigh in on such an important measure.

Sincerely,
Santosh Viswanathan

I am writing to state that I Oppose the proposed regulation referenced above.

We are no where near prepared to handle all electric cars yet and won't be for a very long time. Not enough charging stations, too expensive, parts are too expensive, no way to safely dispose of the batteries, slave labor in foreign countries being used to gather the materials needed to make the batteries and this should be a person's choice not a mandate to buy or not to buy anything. Global warming is a Hoax.

Sincerely,

These vehicles could in no way perform as well as gas powered cars. First of all to charge up these cars takes a very long time, and unless these chargers are positioned all over the country in all the right places, people are going to be stranded, period. If the grid goes down, which is very possible since everyone is preoccupied with the proper pronouns for transexuals, we are up that infamous river without a paddle. Needless to say we are up that proverbial river as I type considering the maniacal policies being implemented by the woke movement.

I am writing to state that I Oppose the proposed regulation referenced above.

EV is great however, the technology is not ready to supplement all gasoline vehicles. Furthermore the power grid could potentially not handle the amount of charge stations in neighborhoods and cities. The only way to handle it is something that California implemented (once lived in) and was a massive issue rolling blackouts for the power grid which inturn caused issues on houses, hospitals and schools. Also during a certain time of year the temperature was unbearable. As a member of this community and life long resident except my time in service I think this idea needs to be further evaluated and not mandated on the Delawareans. You should be given the option. Also if you look at the statistics moving towards this. Vehicles are not the issue, ships and planes and other countries that do not abide by the regulations set in place by the United States and Allied nations are the issue. We also as a community will not be able to afford this change currently right now. Unless you as a party lower the electric bills and install solar panels on every single home in Delaware. Feel free to contact me any time, I can also speak on this further in person and in public.

Delaware is not California. Most of the traffic in Delaware is from out of state. During evacuations for storms many people would not make it away from the coastlines. The coastal area will never have enough charging stations for the summer crowds combined with local residents of Delaware. All Fire companies will have to have hazmat teams for accidents and foam equipment for fires. It takes hours to put out a car fire with water and a fire can flare up hours after it is out. Tow companies in Florida will not tow electric cars on roll backs due the fire hazard.

I am writing to state that I Oppose the proposed regulation referenced above.

This idea or mandate to go to zero-emissions vehicle is not a well thought out plan not only for Sussex county but for all three counties. It will be very detrimental for the people who cannot afford ev cars who live in rural areas that are not serviced by DART. Once Dart goes ev prices will increase tremendously for one thing . I personally witnessed this during the pandemic and the schools remote learning. My daughter and her children. suffered with learning because she isn't serviced by a cable company for internet. She was forced to pay twice the amount for a phone service internet just for her childrens learning. She can barely make ends meet primarily with the amount of great paying jobs not available in her area. The cost for attaining such vehicles, set-up for charging and maintaining said vehicles is going to be tremendous for alot of people, seniors included. Lets get the auto industry to work harder on decreasing vehicle emissions and cheaper fossil fuel vehicles that would meet the emission standards set for now and future.

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

I support incentives for EV and hybrid vehicles but strongly oppose a mandate forcing consumers to have no other choice but EV. EV cars are heavier than ICE (internal combustion engine) cars. This leads to shorter tire life and increased wear on roads. Accidents can be more severe due to the extra weight. Some insurance companies are totaling EV's after seemingly minor accidents. Insurance costs will naturally increase due to this. EV car accidents and car fires are problematic for first responders. Extreme care must be taken to protect fire fighters from high voltage when extracting a victim from a wreck. A battery fire is hard to put out and a damaged battery may reignite hours after wards. Recycling and disposal of the battery is in uncharted territory, both in cost and impact on the environment. Electric supply must be very carefully considered, are utilities prepared to supply the increased demand. EV cars take time to recharge. If Delmarva needs to be evacuated due to a hurricane or other disaster, EV cars will jam the exit bridges from our 'island' Many EV's will run out of power sitting in traffic for hours trying to get over the bridges. Encouraging hybrid vehicles has merit, but forcing consumers into EV's has way too many problems and is forcing unfunded mandates onto consumers.

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

The Dems are great for taking things away and trying to force us into doing what they want. What we need is innovation. Something to replace gas run cars that everyone can get on board with on their own. Something that people want to buy AND can afford to buy. Why not propose grants to those talented people to come up with ideas. Prince William's Earthshot Prize is a perfect example of the challenge. Delaware used to be a state where innovation took place. Why not rise to the challenge. It's a positive that people can get behind and works well against the Dems agenda of force in order to make change. JMO

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

Where is DNREC or the State of Delaware going to get the charging stations and the power to run them??? Why are the people of Delaware and the rest of the people of this once great nation being forced into buying electric vehicles when you can't support them. It will take twice as long to travel from point A to point B. Would any of you send your wife or girlfriend on an extended trip if she was forced to spend an hour or more waiting for access to a charging station and then wait to change her car!! I think not!!!

Sincerely,
Stanley V Donovan

I am writing to state that I Oppose the proposed regulation referenced above.

What will they do during a power outage? How will our emergency vehicles help and emergency staff get to work if their vehicles will not charge during a power outage? This sentiment is INSANE. Stop selling our oil to foreign countries! Stop giving our money to foreign countries! Focus on our country and our homegrown fossil fuels. STOP voting democrats into office. What about our boats? Will they be electric, too? The generators we use during power outages - will they be electric? I have more to say but I will stop here.

Sincerely,
Kerry Onorato

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

This is a political response to a technical issue. The environmental impact of the entire process of mining rare earth metals, manufacturing batteries and upgrading the electrical power infrastructure needed to charge batteries has not been quantified. Hybrid cars would be a compromise which would provide the power generation in each vehicle and eliminate the need to upgrade the power grid. The fuel needed by hybrid cars should be equivalent to that which would be required by expanding power plants.

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

I oppose this mandate. The infrastructure is not in place to support it. Fossil fuels are used to generate the electricity need to charge the batteries of EV vehicles. The cost is way to high for people to buy EV vehicles. There's no way to recycle the batteries. Replacement batteries cost way too much, over \$10,000. Too many jobs will be lost with fewer gas powered cars being repaired, and sold. Loss of revenue from gasoline tax at the pump.

Sincerely,
Ellen Dill

I am writing to state that I Oppose the proposed regulation referenced above.

I am vehemently opposed to this mandate. You obviously have not done proper research on this matter. The making of electric car batteries seriously damages the environment. The cost savings are not significant given the cost of the cars and the cost of electricity, which will have to increase significantly given the need for more power. Not to mention that this mandate is not even legal as the DNREC does not have the authority to do so. Stop making decisions for the people of Delaware. We are able to do so on our own. Copying CA is never a good idea. Take a look at their deficit!!

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

Delaware electrical infrastructure is insufficient. Such a mandate would force us to rely on electric produced outside of Delaware making our monies go to foreign entities. All the while increasing our reliance on the most expensive form of energy. If that weren't enough, our household electric bills will radically increase. . An EV mandate hurts our planet forcing a tremendous impact on natural resources. To make the batteries our dependent on other countries, let alone other states has an overwhelming deleterious effect on our planet many magnitudes greater than the carbon dioxide an EV mandate is targeted at. . DENREC would be better suited levying a tax on third world rice farmers who produce the lion share of anthropogenic methane. A greenhouse gas 100 times worse than CO2. . Further an EV mandate is an impingement on my freedom for fuel choice. Such impingement is only an effort to have a pleasing appearance to massive states like California. We are Delawareans, we are proud of who we are and need not fear the bear on the west coast. As a Delawarean I am tired of that bear stealing my freedoms!

This is so premature. The infrastructure at this time not only in Delaware but the rest of the country, does not have enough charging stations.. It will take years to have chargers for all these vehicles that have been mandated... I will never trust electric vehicles to travel long distances or feel safe when approaching a backed up highway where you must sit and wait until the accident, work area, or whatever is stopping traffic.. this and other concerns need to be addressed before any mandate is enforced..

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

We do not have the energy infrastructure to power electric vehicles. This mandate will price poor people out of buying and driving cars. It will make them poorer, leading to more poverty. These vehicles batteries are also made with minerals from some of the most environmentally irresponsible mines in the world. They are then made in China which will have 3 times our coal power energy infrastructure to build not just EV batteries, but also Solar Panels and Wind Turbines. If we're concerned about Carbon Emissions, we shouldn't be mandating cars that run on batteries manufactured with some of the dirtiest electricity on earth. Lastly, these vehicles will never be carbon neutral. They are made with dirty mining practices, dirty manufacturing, and then are powered on a fossil fuel grid. Not to mention that it takes hours to recharge them, rendering them environmentally and economically inefficient. This is a terrible, unrealistic, and irrational policy that makes us beholden to China. It is also a bad idea that is a carbon copy of a California Law/Mandate. California is a State that people are leaving due to bad policy. We should not emulate them.

Sincerely,
Andrew Charlton

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

1. Why would any state follow anything California does. In case of EVs, Californians have been asked to NOT charge vehicles due to grid overload. 2. That will happen here as a rush to adopted this "cult" behavior! Infrastructure is NOT ready and may never be as YOU strip us of the right to buy gas powered vehicles on your way to outlawing gas (the more affordable) stoves and home heating. You must be drunk on the power of regulating the lives of so many! As far as Gov Carney deciding it would not cause hardship to the people of DE, he is being less than truthful. The vehicle cost more as well as the insurance. Replacement parts are astronomical if you can even get them. 3. Reliability of getting to your destination is of concern. To get near what automakers spew for milage on a single charge, the Moon needs to be in the seventh house and Jupiter aligned with Mars!! 4. The danger of the previous statement is many faceted. No battery no anything. Not even getting out of your car. And if you do manage to realize you are low and about to be stranded on a country road as we have here in Sussex, it could be a recipe for disaster for the vulnerable often targeted by criminals. 5. I have tried to keep this polite even though internally there is so much more I would like to say in a much different way. I will end with this. The Socialist/Communist way of regulating our lives has arrived. You are telling us what medical treatment we must have, what how and when we can be mobile, how and when we can cook/eat, clean our clothes. That is no way to live. What a display of arrogance! P.S. I have lived through at least three "End of the World" scenarios and the only thing that has come to fruition is that the spewers have become extremely rich!!!

I am writing to state that I Oppose the proposed regulation referenced above.

I don't want to drive a a one speed giant computer remotely controlled by a cloud based central grid. I don't trust the government telling what I can buy to save the planet when "they" all fly around the world in private jets. Also to produce these vehicles requires finite materials such as cobalt that are mined using slave labor. These are just a few of the examples why EV's are not for everyone.

The zero emission vehicle mandate needs to be trashed. This is extremely unfair to the residents and the businesses on Delaware. Remember...you are here to work FOR the people of Delaware. Unfair and unrealistic mandates is nothing short of a dictatorship. If people want to purchase an electric vehicle, that is their right. If people want to purchase a gas vehicle, that is their right. Remember...America is supposed to be the land of the free. Trash this mandate!!!

As a country and as a state we are not prepared for the uptick in electric usage from the zero emission mandate. I am also completely against the government telling me what type of fuel vehicle to drive. If the mandate goes into effect this will be one more reason why we need to leave Delaware for a state that actually listens to its residents

I am writing to state that I Oppose the proposed regulation referenced above.

I am opposed to this mandate. We do not have the infrastructure to support it and it will place an unnecessary burden on the elderly and low income individuals. Having goals and targets to reduce emissions is commendable, but mandating what we have to buy and use is unfair and will cause an undue hardship.

I am writing to state that I Oppose the proposed regulation referenced above.

Electric cars ARE NOT environmentally friendly. I know plenty of people who can repair ICE's so I can avoid the repair shops and their \$150 an hour for labor alone. Electric vehicles require people to go to the shop because nobody knows how to fix them except MAYBE someone who was certified. A battery for my truck is about \$200 to replace. I can do that myself.. how much it cost to replace a battery on a Electric car? Don't forget the labor and special technicians that have to do it. ICE vehicle catches on fire. It gets put out and normally stays out.. How long does it take to put out an electric car fire? Whats the chance of reignition? Current electronic motors have so many issues with computers, sensors, wires and relays as it is, and you want the whole car reliant on a computer? Not interested.

I am writing to state that I Oppose the proposed regulation referenced above.

These plans will cost consumers of Delawareans more money, endanger our environment, economy, and national security, and take away options for Delaware citizens to choose the vehicle that best suits their needs. Electric vehicles are expensive. The average price of an electric vehicle is about \$18,000 more than the average price of a gas vehicle, and profits have been elusive even at that price point. If electric vehicles made significant environmental progress, that would be one thing. But they don't. Electric vehicles are not "zero" emissions—they create more emissions than internal combustion engine vehicles when they are produced, and they also cause emissions when they are charged, usually by burning fossil fuels.

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

I would like to express my concern for the implementation of the electric vehicle mandate. I believe that mandates have no part of our society in the Free United States of America. We have the God given right to make our own choices that work well for our families, budgets and communities. We have come such a long way from the invention of the very first car, we get our cars inspected and they go through an emissions inspection here in Delaware as well as most states. I would like to think that these tests are improved upon every year making them more efficient year after year. We are the second smallest state and should in no way be compared with California who has thousands of more people, more cars and more smog than our little state could ever have. Most Americans would like to do their part in saving our planet, but we must have choices, not an ultimatum. I believe we as taxpayers should have a say and a vote in matters that affect us. Many have said that we don't have the infrastructure in place to support hundreds of electric cars. An alternative could be Hybrids, why is this not even an option?? Thank you for your time and attention to this matter.

Sincerely,
Susan Worton

An absolutely ridiculous mandate! Think about everyone trying to plug in cars every night!!
How will it be possible to provide all the electricity necessary plus heating, cooling and cooking!

Sincerely,
