RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

Mandates are a form of tyranny, whether at the State or Federal level. The People should decide when and if they wish to purchase an electric vehicle, not the government or some state agency such as DNREC. Unfortunately, we have bureaucrats that believe they know what's best for the populace even though they have no expertise or experience in the technology. They simply promote the current narrative coming out of Washington. When electric vehicles become efficient, reliable, and most importantly affordable to the masses, then The People may choose them as their desired mode of transportation. Freedom of choice and a free-market economy is what America is all about. Thank you.

Sincerely,
James D Van Pelt

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

An electric vehicle requires six times the mineral inputs of a comparable internal combustion engine vehicle, according to the International Energy Agency. EV batteries are very heavy and are made with some exotic, expensive, toxic, and flammable materials. There are pros and cons to all forms of energy. Stop assuming it's all positive there is a downside to this.

Sincerely,

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

I do not and could not afford an EV. They pollute more due to excessive tire wear particulates, the batteries are hazardous from birth to end of life (about 10 years), there is not enough electric generation or infrastructure to support the EV push. It is unfair to less than the well to do for future transportation availability. It is a silent push for people to be forced to use public transportation which isn't widely available in the Wilmington suburbs. I am against this EV mandate. Thank you.

Sincerely,

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

With humble respect for the people that work for DNREC and the State in general, I submit this zero-emission policy is ill advised, not based on empirical evidence but rather flawed politically based constructs aimed at controlling "We the People". There is no empirical evidence to support CO2 emissions or levels in the atmosphere as being harmful to the planet or people. On the contrary CO2 is necessary for every living plant to survive and emit oxygen, which every human needs for the continuance of life. Dropping CO2 levels could kill every food plant known to man worldwide and that will kill us. This zero-emission policy will adversely affect the poor, (who will not be able to buy a new EV), business owners, infrastructure, construction and maintenance activities as well as all aspects of our citizens need for energy. It is energy that has fueled our tremendous growth and success as the greatest nation that ever existed. Why kill 'the golden goose'? EV's will not cure our problems. The electrical grid cannot support the added demand of EV's. Only continued research into alternative energy resources will. Why are we addicted to Chinese, less than efficient solar and wind products? Why are we supporting China in their efforts to win an economic war against the USA? I would be very willing to speak to legislatures on the futility and failure of this political EV construct. What happened to common sense? Thank you for the opportunity to let my voice be heard. I am writing to state that I Oppose the proposed regulation referenced above.

I am not convinced that we have the capacity to handle the electric load this would place on our current system. Nor do I believe that we can make the changes necessary in the timeline proposed. The cost would be astronomical and would be passed on the consumer. In addition, the consumer would also be responsible to bear the cost of upgrading their own household connections. Not to mention on top of all of this the purchase of an electric car as well.

Sincerely,
Kenneth Figgs

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

This mandate will drive some dealerships out of the state, as the demand for EVs cannot be 'mandated' but rather must come through a competitive market. Dealerships leaving the state would be an additional burden on Delawareans for purchasing and maintaining vehicles. In addition, an honest study of EVs would look at the entire impact of such a change, including, but not limited to: the mining of materials by very young workers in Africa, control of such mines and materials by China (not the US), the amount of fossil fuels burned in the mining of materials and manufacturing of the EVs (which FAR exceeds internal combustion vehicles), the lack of electricity in our grids to support more than 8-10% of vehicles being EV. In addition, WHY would the DE Senate want to put into place anything that California would enact? California, under their leadership over the past decade, has gone from the 'land of milk and honey' to the state with the highest % of residents below the poverty line...even greater than Mississippi, West Virginia, and Arkansas. Their budget is a catastrophic deficit, and they continue to enact laws, such as this EV law that you are considering, that put them further behind, and decrease the size of the middle class. Finally, if you think that EVs are better for the environment, I would suggest that you do a deeper look into the overall impact, and not just what California is doing, or what the environmental special interest groups are telling you. You will find that what they are espousing is inaccurate, at best, and very damaging to the environment, the economy, and the middle and lower classes as worst. Thank you.

I am writing to state that I Oppose the proposed regulation referenced above.

There is NO scientific data that justifies the Green New Deal. When did Al Gore, in his book "An Inconvenient Truth" predict that the polar ice caps would be melted? 2013. If they are going to melt, why did the Obama's buy TWO water-front properties? Why did the Biden's buy a property between a tidal canal and the ocean? More CO2 in the air means more greenery. No one addresses the carbon footprint an EV has even before it is driven off the dealership lot, or how the batteries are to be dealt with when they no longer hold a charge, or the origin (Communist China) of the precious metals required to make the batteries in the first place.

As an Aeronautical Engineer and scientist, I can say with some authority that this mandate is the wrong way to go. I own a hybrid vehicle and have designed and built electric bicycles since 2005, so I'm not anti-EV. However, placing mandates like this are the wrong way to go with the transition from gasoline powered vehicles to alternate solutions. The subject is too complex to explain in a short paragraph. Happy to have a discussion with anyone who wants to be educated in the subject. I am opposed to this mandate.

I am writing to state that I Oppose the proposed regulation referenced above.

This mandate is unrealistic! The impact on our electric grid will be overloaded. What is wrong with transitional measures like supporting hybrids like I drive? and have driven for 8 years. I am for being a good steward of environment and feel many more would be willing to ease into reducing pollutions, however, mandates to make changes like this before you have all the research collected, are costly and hurt middle-class hard-working family. Thanks for listening,
Karen Wilkens

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

There are many studies showing that the industry will not be able to support this initiative with the number of vehicles required, we do not currently have the base load electricity to support this and we will have less in the future due to the closing of fossil fueled plants, and the vehicle cost is too high to be affordable for many families. The reduced range for electric powered vehicles is also a problem for both some passenger cars and most delivery vehicles and trucks.

I am puzzled at your mantra, "Zero Emission." That's what makes it a political dishonest position. There isn't any zero emissions. A Tesla's battery has already produced 17 tons of carbon dioxide before it is installed in a car. This is simply Democrat's wanting to control American citizens.

Please refer to the Ted Talk on EV's <https://www.youtube.com/watch?v=S1E8SQde5rk> The CO2 emissions from manufacturing EV's is worse than a combustion-based car when you include all areas that contribute to CO2 emissions. The mandates should focus on Hybrid vehicles that make sense in the short term. EV = consume electricity = coal burning = Co2 emittance + battery manufacturing and car manufacturing = more Co2 emissions than combustion based cars A hybrid car makes the most sense based on today's technology. Mandates should focus on moving in this direction. Thank You

Sincerely,
Robert D Gamble

I am writing to state that I Oppose the proposed regulation referenced above.

Commendable Biden's pursuit for going all electric, yet the inadequacy of solar/wind generating sources predicts hybrids of independent mobility continuing natural/propane/hydrogen aboard units. Further, prejudiced, having been close to Russ Petersen at the outset of DNREC, designing the prototypal DNREC Headquarters (un built)now saddened to witness the compromise of the Coastal Zone and the inability of DNREC to enforce upon the environmental infractions. Implementation should be OUT of the hands of DNREC. THANK YOU Charlie Weymouth, AIA Emeritus, Weymouth Architects and Planners since 1968

Electronic Vehicles are not affordable to the people in DE. Plus, in our free society, why are we stopping the sale of gas powered cars? I drive back and forth to FL often. Using EV would be a disaster. Can our electric grid handle everyone plugging in their car? In 100 degree heat when the ACs are cranking and the grid is tested... are we just going to walk because our cars can't be charged? Why does it have to be one VS the other. Both can coexist in Delaware.

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

While I support the use of EV vehicles, I don't believe the US is ready for them to be mandated. They are inconvenient for long distance travel (the battery life doesn't last long enough). The infrastructure is not available for charging all of the EV cars, they take too long to charge, there is no plan for dealing with used batteries, and the mining for battery materials internationally is still an issue that needs more research.

I am writing to state that I Oppose the proposed regulation referenced above.

I have been against the EV mandate since I heard about your proposal and I am even more so now. To help me better understand the EV mandate, I have attended the EV mandate meeting at the Millsboro Indian River Senior Center in April 2023. I have also read the evaluation by the Caesar Rodney Institute(CRI) shown below and read their full report. If everything that the CRI has documented is true, I am really concerned that the DNREC is trying to get this mandate passed on so many misleading statements. I am very concerned that our DE state officials are not being totally truthful. I also am concerned that we are following another states regulations (California) that is located thousands of miles away from us. We do not have the air pollution issues that are occurring in California. Why do we not have our own regulations based on what is right for Delaware? Again, to be perfectly clear, I am against the State of Delaware mandating what vehicle I must buy.

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

My name is Sherry Long As a citizen stakeholder in the Delaware Clean Energy Committee Forum, I am here today in opposition to a California mandatory regulation on Delawareans. Besides the fact that we aren't in California, with the pollutants caused by multiple conditions NOT in our Eastern coast... Delaware is already diligently working on our clean resources. For anyone paying attention, we have reduced our emissions, and for southern Delaware, the Cooperative is already succeeding the Paris Clean Energy agreement!!! What concerns me most is that we continue to expect the "technology of the industry " will hopefully get the Clean Energy efficient availability in time for the projected growth requirements of the California plan. However, even California has been continuing to change their plans as the worst possible case scenario is occurring due to the inability of the industry. While I AM For Green Energy... I'm not for mandatory ignorance. Especially from those who are unelected regulatory individuals with zero accountability. As one who questioned the states Grid sustainability, I was informed PJM had zero concerns. Sadly, the very real issues became realized challenges Christmas Eve 2022. Our Delaware State Emergency Management Agency sent out the alerts 🚨 📢 It would seem that the previously mentioned confidence of PJM is not as good as suggested. Notable: when I had mentioned the concerns of becoming Texas and having an emergency situation in which we could have Delawareans freezing to death in extreme cold or dying in the mega heat of summer ☀️ it was dismissed in our energy stakeholders forum. However, it not only became the topic of interest following the Dec. Incident... Our own Senator Stephanie Hansen questioned Secretary Garvin during the state Budget Committee hearings as a result of not having any requests for funding in order to strengthen our state grid system. During the Small Business caucus The secretary seems to have added the possibility of working on our grid .. we aren't prepared. I oppose this.

Sincerely, Sherry Long

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

EVs certainly have a place in transportation. However, the Denrec program is poorly conceived. The grid cannot and will not be able to support the influx of electric vehicles. Brown outs and restrictions to charge EVs will be the norm. Charging station centers would have to be at least double the current number of gas stations with at least a dozen charging ports at each location. The average person can't afford to purchase an EV. Battery fires harm the environment. Thousands of gallons of water to extinguish a fire saturate the water supply with toxic chemicals. The added weight of EV components will add 1200-2000 lbs to a vehicle. Our roads, definitely our bridges and parking garages will not support the collective weight of these vehicles. Furthermore , the average person can't afford to buy one.

Sincerely,
Robert Cyran

I am writing to state that I Oppose the proposed regulation referenced above.

This unconstitutional mandate cannot stand. This is yet another ill-conceived notion by the climate change alarmists. Technology needs to lead the way on this. Anyone who understands energy knows that our grid cannot handle this and there are other forms of energy that will likely become available that will not destroy businesses. Further, these suppress our representative government. I understand the political reason for the Governor's actions. Why would anyone want to put their party on the record supporting this egregious action? It seems that a government of, by and for the people is a pipe dream in Delaware. No wonder the schools have stopped teaching civics.

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

A proposed regulation of this magnitude should be voted on by elected officials who are directly accountable to the public and not by a governmental agency. Delaware does not have the electric infrastructure to support the load that will be placed on it nor can it be upgraded in time to support the proposed schedule. The tourism industry will be dramatically affected as Gas Stations will begin to decrease and travelers will not desire the added inconvenience versus going to adjoining states. The proposed EV Regulation is a bad idea for the people of Delaware and should NOT be enacted and will do nothing to improve our quality of life in Delaware.

I am writing to state that I Oppose the proposed regulation referenced above.

The current proposal is way to aggressive! Blend Hybrid, alternative fuel (hydrogen) , and EV . Don't put all your eggs in one basket (EV). Set some efficiency goals, let the free market sort out the best alternatives. After all, how is our electricity produced??? Until we transition away from fossil fuel power generation AND SIGNIFICANTLY EXPAND THE POWER GRID to keep up with the vehicle transition, we need to hedge our bets!

This mandate will negatively impact low income families. Electric vehicles have not been proven to be better for the environment but actually worse. The mining required for the batteries is proven to take advantage of people who live third world countries leading to exploitation and death when the unsafe mines collapse. It's obvious that Delawareans DO NOT support the mandate.

You can park these vehicles in your garage because of fire! That is a major inconvenience especially to older people! When is the price of replacement battery going down as its way too expensive for the majority of people & where do you dispose them! Many more issues too numerous to mention!! Who is going to equip every household with a charging station? It takes a minimum of 10 hours for a full charge. What if you are on call and need to get to work? Has anyone really thought this through as it appears too many issues & not enough answers??

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

I just purchased a small gas car. Cars are hugely expensive right now without being EVs. I don't know how families can afford an average car. Many are going to the KIA and HUNDYI just to be able to have a reasonably priced family car. How can they and our seniors on fixed income even consider an EV? This is putting American made cars financially out of reach for people. We need the auto industry in America. I thought Joe liked unions. He'll be putting a lot of union workers out of a job when people can't afford an American car. Secondly the charging stations will never be ready in time for your mandate. Taxpayers shouldn't be paying for those stations either. Private industry should just like with gas stations. I have serious concerns about vulnerable people pulling up to an unmanned station and being assaulted by criminals. Perfect spot for a woman to be attacked. I have visions of going on a road trip with little ones and having to stop for an extra 45 min to charge a car! Let's talk about those batteries. They come from China. We do not need to be any more dependent on China! We have clean gas! There can be a goal of going more EV but until we have good private infrastructure in place it will be a Personal and financial hardship for everyone in this state. California is a failed state. People are leaving in droves. Why would you want to emulate anything CA does? This isn't something that should be done by decree. That is serious overreach by politicians. Put it on the ballot in 2024 and let the people decide!

This is against both the federal and state Constitutions. This act is in affect legislation and an unelected Bureau has usurped the authority of the legislature. In addition, DE doesn't have the infrastructure to support this. Also, the required mining in countries that have no environmental requirements let's into the atmosphere any gains we might acquire by adopting this communistic plan. And what happens to the supply chain if/when the countries want to lower or restrict their resource?

"Zero Emissions" is a lie! Mining of the battery materials adds more pollution than is saved in the EV battery's lifetime. Add to that, world-wide electricity is produced predominantly by coal and oil which causes more emissions. Even windmills produce more carbon via manufacturing, cement foundations, spray petroleum de-icing chemicals, etc. than they save. EV's hurt Americans, help China, and pollute. Zero emission mandates are lies to make politicians feel-good propaganda lies. Work on over-coming the hurdles to truly emission-free solutions like nuclear.

Sincerely,
Glen Urquhart

I am writing to state that I Oppose the proposed regulation referenced above.

One of the unfortunate beliefs underlying this mandate is that we can enter a world where electric vehicles can be effectively produced, afforded and will positively impact anything in our world. We are unable to effectively produce enough power to handle current needs, let alone with the addition of electric vehicles. How will we ecologically dispose of the used batteries?? This approach is so short sighted, with decision-making being led by agenda and not reality. So very sad that elected officials fail to see the forest for the trees in their valiant attempt to subvert reality.

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

I strongly oppose the fact that DNREC is trying to impose a mandate on choice of vehicles. I do not think our grid is ready for any surges in EV's. I think the cost of a vehicle and cost of electric are not something the average family can afford. I also think the technology of the EV's has not been tested long enough and has potential to cause dangerous hazards in the case of a fire. I am also concerned about what we will do with old batteries as they need to be replaced along with the cost to replace. Most of all I am opposed to supporting the Chinese economy. This is America and we should always have a choice.

RE: Docket #2022-R-A-0011

I am writing to state that I Oppose the proposed regulation referenced above.

There are several arguments against stopping the sale of gasoline vehicles and the claim that car batteries deplete other minerals in the earth. * **Gasoline vehicles are still the most affordable option for many people.** The upfront cost of an electric vehicle is still significantly higher than that of a gasoline vehicle, and the cost of electricity to power an electric vehicle can vary depending on where you live. This makes electric vehicles out of reach for many people, especially those who live in rural areas with limited access to charging stations. * **The infrastructure for electric vehicles is not yet in place.** There are still not enough charging stations available, and the ones that do exist can be slow to charge. This can make it difficult for people to use electric vehicles for long trips or for everyday commuting. * **The environmental impact of electric vehicles is not yet clear.** While electric vehicles do not produce tailpipe emissions, they do still contribute to pollution through the mining and manufacturing of their batteries. Additionally, the electricity used to power electric vehicles can come from fossil fuels, which means that they are not always as environmentally friendly as they seem. Overall, there are still a number of challenges that need to be addressed before electric vehicles can become a viable alternative to gasoline vehicles. Until these challenges are overcome, it is important to continue to sell gasoline vehicles as an option for people who cannot afford or do not have access to electric vehicles. In addition to the above, there are also concerns about the depletion of other minerals in the earth due to the production of car batteries. Some of the key minerals used in car batteries include lithium, cobalt, and nickel. These minerals are often mined in developing countries, where environmental and labor standards may not be as strict as in developed countries. The mining of these minerals can have a negative impact on the environment, including water pollution, air pollution, and habitat destruction. The mining of these minerals can also lead to human rights abuses, such as child labor and forced labor. It is important to weigh the environmental and social impacts of both gasoline vehicles and electric vehicles when making a decision about which type of vehicle to purchase. Ultimately, the best choice for each individual will depend on their own circumstances and priorities.
