Has DELAWARE really gone this far into this without thinking?

Please reject this until:

1. Those cars are affordable for families that need large vehicles - or even vehicles for that matter.
2. costs to alter electric in home to charge cars.
3. Charging stations and costs involved with that.
4. Taxing solutions? We are now to be taxed on electric for new roads and bridges?
5. Electric Supply can handle loads.
6. Control on electric costs - now they monopolize even our driving costs?
7. Look for other solutions rather than this.
8. Manufacturing of all of this should be in the USA - right now it is not - batteries made in CHINA.

And I am sure there is a bunch more I am missing..... as I am not as smart as you all are.
