

**Subject:** EV Mandate

**Date:** Friday, May 26, 2023 at 10:27:03 AM Eastern Daylight Time

**From:** Carol Muller

**To:** HearingComments, DNREC (MailBox Resources)

Dear DENREC,

**I am writing to express my opposition to the proposed rule mandating a switch to EV vehicles in Delaware.** The state's mandate to gradually restrict gas-powered vehicle sales between 2026-2035, at which time gas-powered vehicle sales would be banned, will have a deleterious effect on Delaware residents in many ways, without offering any benefits.

In addition, government is supposed to be “of the people, by the people and for the people”, and not tyrannical decisions from on high, as this proposal is. Anything like a mandate that affects all Delaware residents should go through the legislative process so we the people have a real chance to express our concerns and desires.

**Here are the immediate problems I see with the mandate:**

1) This mandate will deprive residents of transportation choices.

a) EVs are too expensive for average car buyers, even with rebates. People on limited budgets would be unable to afford such a luxury.

b) Low and moderate income families will have trouble finding transportation. The cost of used gas-powered cars will necessarily skyrocket as demand will increase.

2) EVs have major problems, including battery life and driving range. Until these issues are resolved, EVs are an unreliable source for normal daily transportation.

3) EV vehicle charging is problematic for many residents, not only because of the lack of charging stations, but also because the length of time needed to charge those vehicles. In addition, anyone living in an apartment or without a garage will not be able to charge their vehicle at home — if police can't stop catalytic convertor thefts, how can they protect people's EV cars on a charger overnight?

4) Delaware's electric grid will have trouble meeting residents' needs with the addition of increased EVs. Unless and until electric capacity is increased and stable, the EV mandate will lead to brown-outs for Delawareans.

**In addition to the above concerns, there is a real problem with the mandate's premise.** Nothing that Delaware would do would have any affect on global temperatures because carbon dioxide does not control the world temperatures. Historically, atmospheric CO2 actually follows a warmer Earth. In addition, carbon dioxide is not a 'pollutant'; our world cannot and would not exist without carbon dioxide as food for plants.

**There is NO catastrophic global warming;** computer programs that 'predict' such warming have never been shown to accurate. In the scientific method, you can propose a theory (such as computer generated temperature increases), but then that theory must be tested against reality. That is where the computer modeling programs have failed—the actual data does not align with computer predicted temperatures. There are plenty of real scientists who disagree with the politicians who promote catastrophe.

In summary I urge DNREC and the Delaware governor to drop this mandate idea. It is not good for Delaware families.

Sincerely,

Carol Muller  
Newark, Delaware
