Comments:

You want to replace gas powered vehicles with electric but at the same time you ar drastically reducing the country's ability to generate electric power. Wind and solar will never supply the country's total electric needs. In addition, there aren't enough and there will not be enough charging stations in the state or the country to charge ev's. The Chinese control almost almost all of the necessary elements required to produce batteries and they are mined by children and slave labor. Where are you going to store depleted batteries? How do you expect people to afford ev's the car manufacturers are losing over \$600 per car which they make up on sales of gas powered cars. As the % switches the losses mount and the car manufacturers will go out of business or merge thus reducing choice. China will then move in with their cheap vehicles and OWN the US car market. Let free market dictate the transition and stop subsidizing artificial power sources wind, solar and ev's.
