We will start off with questions. Why is the government trying to force people to purchase a vehicle they do not want, cannot afford to purchase, cannot afford to maintain, cannot afford the electric charging equipment for their home, and cannot afford the new battery when it is needed?

The electric cars present too many dangerous problems. For instance, just this week a fire broke out in a warehouse of electric cars that were waiting to be sold to clients when the battery of one car caught fire. The fire quickly spread and many hundreds, if not thousands, of cars were totally burned up in the fire.

We heard recently on a radio program that the global temperature around the earth has not gone up since 2016. If this is the case, we are moving too fast to change something that does not need to be changed at this time.

We will stay with our gasoline-powered vehicles. Our nation has ample reserves of petroleum that can be burned cleanly. It does not make sense to outlaw gasoline engines for electric vehicles that catch on fire too easily and are quickly burned up.
