Comments:

I am against any EV requirement that may be imposed on us and I against the elimination of any internal combustion products that now exist. There is not ample or affordable excess power available in the grid to accommodate EV requirements, therefore, when the power grid fails, we become immobilized and if fossil fuels are not available, we have no viable options. Additionally, EVs do not meet our needs, are too expensive and battery replacement is prohibitive. There is no way to have the fuels and power required to operate farms (our food source) and trucks (our delivery and supply chain) Once the fossil fuels are eliminated and the refineries fail and close, there is no turning back. The intention of these types of regulations is to control the citizens of the USA by removing their ability to have rights, mobility and democracy. Delaware is not California, we do not want to become like California. Do not destroy our state or our freedom!
