Organization: Not actually

Comments:

In reference to what would, if passed be a mandatory decision that fuel type combustion engine vehicles would cease to exist...number one, I think you'll find that not everyone will be able to afford, unless the state is planning to subsidize the cost and hearing the cost for repairs and/or cell replacement? Not like a conventional gas or diesel engine, transmission, or rear. These ev should be a bit more self sustained like solar panel roof top, stators on all wheels to at least generate some percentage of power while in motion. So I'm saying that this should be an elective decision, not a mandatory decision. The automotive industry has made great strides since the 60s and continue progress. I believe the public has the decision whether to buy an electric vehicle or that gas/diesel vehicle.
