Comments:

NO. We should be able to purchase the type of vehicle we want. EV's are more expensive and the damage to the environment caused by mining for the minerals necessary to produce batteries is extensive. Not to mention what do we do with depleted batteries. The U.S. is meeting or exceeding emission standards while China and India continue building new coal fired plants and polluting the atmosphere. And by the way, do we have the infrastructure to charge a greater number of electric vehicles? No. And where does the power come from to charge electric vehicles? Mainly fossil fuels. Bottom line, let the market determine. When it is economically feasible it will happen.
