Dear Sir/ Madam

Please reject the EV Mandate. We need many pillars in our energy supply. Forcing transportation energy to be electricity abandons a stable and reliable fuel source essential for our security and prosperity.

Delaware is not self-sufficient in electricity today. Adding 1 million EV vehicles in Delaware to the grid, over the years, will fail our power grid and do terrible harm to the public.

It will also do destruction to our finances to walk away from the existing fuel networks. The power gride will have to be doubled to account for recharge demand. It isn't feasible.

Someone there should know this. Someone there should care.

Please don't do this EV Mandate. If you wish to harm the people of Delaware, find a different way of bringing paid. Don't make us poor and in the dark.

Kevin Wade
