Organization: No

Comments:

As a Delaware property owner since 1996 and full-time resident since 2010, and as a Professional Engineer since 1974, I am OPPOSEDED to any mandate that limits the ability and right of Delaware citizens to purchase, own or operate vehicles (including aircraft) and/or construction equipment powered by fossil fuels (including gasoline, diesel fuel, natural gas, propane, etc.). Further, I am opposed to the political pressure on users of natural resourced energy to pay for inefficient and inconsistent sources of electric power, including solar and wind which are incapable of providing sufficient electric power to meet the needs of our citizens in their homes and for their vehicles. Unless and until this state commits taxpayers' monies to building nuclear power capabilities (including full size power plants or micro-nuclear reactors), I will firmly oppose any mandates to restrict or eliminate fossil fuel powered sources for electricity. I find it ironic that those who favor getting rid of fossil fuels and also opposed to the one energy resource that actually provides the cleanest power of all - nuclear - for reasons that are not supportable by facts!
