Comments on Docket #2024-P-A-0005 -- Croda Flare System Permit

Name: Robin Bullock

Phone: 3024655938

Email Address: thornthebull@yahoo.com

Organization: NO

Comments:

I do not approve of the location of the EO portion of the plant it's too tooo toooo close to Collins Park, the Delaware memorial bridge and Holloway terrace. That being said, the location of the flare system should be 10 miles at least from civilization. I suggest that you should contact Vivotek camera system, to add a significantly amount of motion detection cameras on the EO plants pressure valves, and other high-pressure devices. When I was there one of your valves under pressure burst on the PO plant. Thank God it wasn't the EO plant. The co2 constant flame for the extinguishing of the in case of emergency EO exhaust goes against the climate control protocols that this nations ambition to eliminate carbon pollution in our atmosphere. You are to be commended for the use of the cherry island land fill natural gas coming from the sewage plant, but you don't go far enough. The Backup generators for the EO plant should be tested under full load weekly by company policy, the state and/or county should require it. HIRE PEOPLE FROM THE ROUTE 9 Corridor.
