September 2d, 2024

DNREC Hearing Officer(s),

While I truly understand that many have their right to object to the proposed building and maintaining of these wind turbines, climate change is reality, and all of us have a responsibility to do what we can to limit and/or improve the conditions resulting in this circumstance.

If, after all these surveys and tests, find that these wind turbines will be better for the environment, and climate change, then they need to be built.

However, my only drawback, or criticism, to this planned proposal, is that if Maryland will be the state that receives the financial benefits -- i.e. tax "breaks" & income from residential & commercial usage --thenI believe that these underground cables from these wind turbines to stations on land, should also be "placed" in Maryland, not in Delaware, where some of the preliminary proposals have these cables being built.

Simply, if Delaware residents will be gaining any financial benefit(s) from these cables being "placed" in this State, then why should our residents & businesses be inconvenienced by these cables located in our State?

I am willing to discuss my statements, above, if need be.

Al Liebeskind
