Organization: no

Comments:

I am totally opposed to the windmills off the Delaware shore and connecting to the grid through 3Rs beach This project has not studied the damage that it will do to wild life. The medically vital horseshoe crab breeding grounds will be effected and there has been no study to document the damage. All other wildl life will also be effected adversely. The cost/benefit analysis is negative and the disruption to tourism will be significant. A better plan is needed and this should not be politically influenced. The protection of our beaches and wet lands is paramount and should be the main goal.
