Comments:

Thank you for this opportunity. Wind power grows the economy. Wind power creates jobs on the Delmarva Peninsula. Wind power grows tourism. Wind power does not release carbon into the atmosphere. Offshore wind increases marine life from what previously existed. Offshore wind can make Delmarva geographically energy independent. Watching the wind turbines being built is inspiring for little children who may grow up to be engineers. Watching wind towers get constructed is fun and informative for most adults as well. And best of all for every Delmarva resident, wind-power is so so so so much cheaper than fossil fuels could ever be, because the wind is free. Fossil fuels can never, never, never, never beat that low, low, low derived energy cost. Fossil fuel interests do not want wind power to compete against them. Therefore they've tried to sow confusion with false facts because they do not see any way they can successfully compete. No Delmarva resident wants to pay more for energy than they have to. For this reason we are extremely supportive of this permitting moving forward as fast as is possible. In a changing world, when you stop moving forward you fall behind. Thank you again.
