Comments:

My wife and I own a home located at 29638 S. Dune Way in north Bethany Beach. It has come to our attention that cables from the US Wind Project could cause environmental harm to the Indian River and Beach Cove which is where our community, Cotton Patch Hills, is located and where we keep our boat. Have you thoroughly investigated all potential negative impacts that the US Wind Project could have on the Indian River and Beach Cove? the channel from Beach Cove to the Indian River already is difficult to navigate, and more silt caused by the cables from the Wind Project would make it impossible to navigate. This would be devastating to community and would lower our property values. We hope you are taking all of this under consideration. Thank you.
