Organization:

Comments:

The wind project is going to cause more harm than good. The amount of energy and money this will take is very unnecessary. The possibility of the turbines breaking or falling apart during a storm would cause dramatic issues for the coast let alone the ecosystem. The impact of having our coast line closed would severely impact many coastal towns in a negative way. If we look at other wind projects they are not doing well. This clearly shows why it would be detrimental to our state to do this project. The ecosystem needs to be considered with this also. I'm highly against this project and it needs to be dropped. We have many other projects that need attention. The growing population and the weakening infrastructure, and the Indian river inlet are two examples of things that need attention.
