Comments:

The placing of electrical cables through the Indian River Bay is not only endangering the welfare of the wet lands, the bay, and all the animals and aquatic life that lives within, it would put people in dangerous proximity to an electrical source. 3 ft buried, you might as well put it laying on the ground. The Indian River Bay changes! The cables, buried 20ft deep will unearth themselves with the currents and/or big storms. Digging in the Bay itself will be killing anything that digs in the muck for protection. That is common sense. Pushing this agenda for \$\$\$ is by far the most evil as calling it "green" to sale to the public. Stop the madness and do not give permits to ruin Delaware's natural resources. You can't turn off the frequency that these cables will be emitting either. I would like to know how high those frequencies are with cables like that. Do the homework bc I don't imagine anyone would want to sleep with a high pitched hmmm in their ear 24/7 and neither does any aquatic life!
