Let's do this right, THE FIRST TIME!

Don't let DE be where a rush job created a huge disaster! (Like the inlet bridge placement disaster). The Indian River is a vital resource for citizens and visitors with its marinas, fishing grounds, bird habitat, etc and etc. wetlands are their breeding grounds.

The stretch of beach from Dewey to the Indian River Bridge is about the last natural habitat in DE that is unblemished by houses, beach guard stands, cars and cars and cars. Driving onto the beach to fish is an almost- gone experience! Don't take this away with exposed cables coming in from the rigs, with broken trash from the wrecked wind blades, etc and etc. GO SLOWLY!

New and better technology is being developed very quickly.

Yes, we will have to do off shore wind to furnish needed electricity. I get that BUT please consider moving slowly to let the technology catch up.

DE is still our "tiny wonder".

It is your job to protect it for our kids and our citizens of tomorrow.

I am confident you will take into consideration all of the facts and make the right decision.

Thank you.
