**Comments:**

I understand the plan is to dredge for the cable to bring the windmill energy inland via the Indian River. We live in Beach Cove south of the River and require navigable egress via a channel to go from Beach Cove into the Indian River. I am concerned there might be a build up of silt/ sand which could prevent the depth necessary to boat in the Cove and beyond. Have you assessed this danger? I know the coast guard uses our Cotton Patch Hills boat ramp to launch their emergency boats at times. Would this still be possible after they install the cables. Please advise. Thank you. Donna Gray
