Subject: DE Off Shore Wind

I am a very concerned citizen DE whose home is just off Indian River Bay. I am also a surf fisherman.

My wife and I have lived on the shore now for 24 years and we are totally disgusted with how the Governor and legislature who have no true respect for those who actually will have to live with the long term damage the wind farms off our coast will do to our local communities & economies.

Why don't you put it to a local referendum in the communities that are going to be impacted by your decision that already has been made behind closed doors.

Once these turbines go in, you just can't take them out when they fail.

The long term economic impact to our communities, right you don't live here, and to the state will be devastating over time.

I think that you New Castle & Kent county legislators should have these wind farms placed in your backyards, bet those would not fly with your neighbors like it is not acceptable to us who live in Lower Sussex County.

Your new green deal is going to increase our energy costs while reducing property values while impacting sea life and the natural beauty of our DE coast.

Please rethink your actions before it is too late.

Thank you.

Respectfully submitted,

Frank J Cruice
