Organization:

Comments:

Several other states rue the wind turbines they have paid so dearly for. The toll on wildlife is high. They are expensive to build and maintain. Ocean storms are fierce. Lines for transporting power from the turbines are difficult and expensive to build and maintain. And they UGLIFY our seashores. Let's be realistic, nuclear power is most reliable and effective power source to replace fossil fuels. Salem Nuclear Power Plant has been reliable and safe. Yet, we let it become obsolete and plan no replacement. No other green energy source beats nuclear energy.
