Comments:

The land and the water need to be conserved in our State, not overdeveloped. The offshore wind deal is a disaster in the waiting, and if recent events in Nantucket haven't proven that, another disaster will. Unprecedented whale stranding up and down the entire east coast to NC. Common sense tells us that these turbines are not efficient or safe for the environment. The disturbance made to the ecosystem, just from the sonar and drilling alone is documented. Imagine these blades, which have proven to be faulty, are subject to the wind velocity needed to provide the power. Common sense. Let's stop the lies about the benefits of these energy sources and look with our eyes and see what the outcome is here. Delaware gets Money, but no power out of the deal. You are willing to lease land that has been protected by this agency since its inception. When will this end? When all wildlife can't exist? This is all in the name of greed and a false agenda, and it's unacceptable. You are the Department of NATURAL Resources and Environmental Control, and I ask for and expect better.
