Organization:

Comments:

We do not support the Quarry Walk project and certainly do not support putting in an underground wastewater system as a temporary solution. The developer and the state agencies regulating this project have been unreliable. Nothing special should be approved for this project. The installation will be disruptive for the neighbors and then disruptive again when it is removed. And while in use it induces environmental risk to the community as well as comes at cost of inconvenience to the neighbors with pumping every couple days (ie truck traffic). Plus, we have had no assurances that there will be no smell. This effort only benefits the developer. And penalizes the community. The solution considered should only be a permanent solution, not a temporary one.
