RE: Sussex Regional Recharge Facility – (SRRF) Wastewater Treatment Plant
Permit Amendment – Artesian Water Company

Dear Mr. Caruthers:

Attached please find the Permit Amendment application documents for the referenced Artesian Water Company's Sussex Regional Recharge Facility. The application review fee of \$750.00 and the advertising fee of \$210.00 will follow under separate cover directly from Artesian Water Company.

The focus of this application package is to secure approval to expand the treatment capacity at the facility to support the wastewater management needs of the region. The requested capacity increase does not require an expansion of the permitted disposal system at this site. No change to that system is proposed under this application. The DER includes a summary of the proposed project and supporting design information in accordance with the regulations. The permitting drawings provide the overall layout of the proposed equipment and are supplemented by the detailed data in the DER appendices.

We look forward to working with you on this project. Please feel free to contact me with any questions.

Respectfully submitted,

KCI Technologies, Inc.

Daniel R. String, PE
Practice Leader | Senior Project Manager
