---

To whom it may concern,

I am writing to express my strong support for Project Washington. This innovative project utilizes a closed-loop cooling system that uses minimal water once filled. It is designed to be highly environmentally friendly, operating entirely on electricity, with backup generators only to be utilized in emergency situations. The facility will operate at 55 decibels, which is 25 decibels lower than typical highway, ensuring minimal noise impact!

Projects Washington represents the type of development the State of Delaware has long sought out. One that generates thousands of jobs, produces significant revenue for the state and county, and does so with little to no environmental impact!! I strongly encourage the advancement of this project, as it exemplifies responsible growth and sustainable progress.

Thank you,  
David H [REDACTED]
