Good morning.

This is email is to voice my protest against the Project Washington data center.

The impact it will have on our environment and our people does not outweigh any perceived benefit narrative they are trying convince us of.

**Diesel generators produce tremendous air pollution.
Our power grid cannot handle the electrical drain this data center will generate.**

**In conclusion the Project Washington's energy drain, water use, diesel emissions and industrial noise will be a detriment to Delaware.
There is no benefit to the Delaware people.**
