Subject: 516 Additional Sources of Air Pollution in Our Backyards
Date: Tuesday, December 23, 2025 6:17:11 PM

I reject your plan to build this enormous electricity and water sucking heat generating pollution spewing job taking humanity destroying machine.

We all know the installation of 516 emergency generators will be immediately turned on as soon as they are installed because they will be ready we'll before our grid can be upgraded for them at our expense. Even as they jack our rates to pay for the upgrades, they will continue to pollute our air with the additional load, whether it's in our back yard or just upwind from us at another fossil fuel plant that should be shut down to fight climate change.

AI is in a bubble so when it inevitably pops, we'll be stuck with high pollution if this survives or high rates or high rates and high pollution because of stranded assets. Either way we will pay dearly with our health and our dwindling capital that is already stretched thin and desperately needed for the transition to renewable energy.

Please put a stop to this evil monster now. This is likely our last and only chance to save ourselves from AI and climate change caused extinction!

Sincerely,

Andrew O [REDACTED]
