Prohibited by the CZA. The amount of electricity, water, and pollution from the data center is prohibited by the CZA

Dear Commenter,

Please note that emails sent to the Secretary through the Sierra Club Delaware Chapter regarding data centers in Delaware that are not specific to the current status decision, will not be reflected in the record of comments for Status Decision 448SD - Starwood Digital Ventures.

If you have not done so already and would like to review the Status Decision application and submit a comment on whether the proposed project requires a CZA permit, is exempt from CZA permitting, or is prohibited by the CZA - you may do so until January 12, 2026 by following instructions found on this DNREC website: [Starwood Digital Ventures Request for Status Decision - DNREC](#).

Thank you for participating in the public discussion about Delaware's environment.

Subject: Please Help Defend Against Data Center Threats!

Dear Assholes,

DO NOT BUILD A DATA CENTER IN NEWARK. I don't gain anything from it, and you are going to have us all pay \$100 more in electricity a month to subsidize some fucking billionaire AI tech bro making slop on the internet. And pollute the environment, and burn through gas. All at our expense. More electricity than the entire state uses normally. What a joke.

It's really telling you are doing this near ALICE-classified residents. Not to mention Kimberton and other section 8 residents.

Vote YES and support ORDINANCE NO. 25-101 to regulate the shit out of them.

I teach AI/machine learning at [REDACTED]. I can do on my laptop all the AI I'll ever need. My students can do all the computation they will ever need on their laptops. We don't need this or want this.

Fuck AI slop, fuck that I have to contact you, fuck these tech companies

With warmest regards (of a thousand exploding suns),

[REDACTED] Phil S [REDACTED]

As we approach winter, we are likely to see higher energy bills as a result of a multi-year trend of unchecked data center development across the region. With one, 1.2 GW, proposed hyperscale data center proposal in Delaware City, at least two warehouses attempting to flip to large centers, and another large scale data center now being proposed in Newark, we have a chance as a state to protect our communities, our environment, and advocate for the wellbeing of our energy system. I urge you to do everything in your power to protect Delawareans from the harmful impacts of data center expansion in Delaware through comprehensive rate design, updating outdated permitting processes, and, when necessary, taking executive action.

Already, we are hearing stories from communities across the nation who are seeing substantially higher energy bills, sharp declines in air quality from diesel backup generators, and a threat to affordable energy as the spike in demand delays the retirement of expensive, dirty coal facilities across the region. It is crucial that we act now, and use all of the tools in our toolbox in order to ensure that Delaware doesn't go down this same path.

Thank you for your time and attention, I hope I can count on you to stand up against irresponsible, unregulated data center development.

Sincerely,

Philip S [REDACTED]
