RE: Material Acceptance
Delaware River & Bay Authority
Cape May – Lewes Ferry
Lewes Terminal -Delaware

Dear Mr. Dickerson:

Weeks Marine, Inc.'s -Dredging Division is of the understanding that the Delaware River & Bay Authority is planning for the removal of approximately 50,945-CY of material from the Cape May - Lewes Ferry Terminal located at 43 Cape Henlopen Drive, Lewes Delaware.

Weeks Marine, Inc. (Weeks) was provided with copies of the following documents for review to determine if the material is acceptable for placement at our Whites Basin Dredged Material Rehandling Facility (Whites Basin):

- Approved Sediment Sampling & Analysis Plan dated March 26,2026
- Survey Plan dated March 17, 2026 which included core sample locations and dredge limits
- Bulk Sediment Chemistry

Based upon review of the sediment sampling analytical results, all compounds detected were below our operating permit levels and the material is acceptable for placement at our Whites Basin should Weeks be awarded the project.

Upon receipt of all required agency approvals and after all commercial terms have been satisfied, this material will be accepted into Whites Basin.

Should you have any questions, please do not hesitate to contact me.

Sincerely,
