Attention: Doug Godfrey

Dear Mr. Godfrey,

This letter is to confirm that tire bales supplied by Scrap Tire Solution are received by Emanuel Tire Management Pennsylvania, LLC and utilized as feedstock for pyrolysis operations at our sister companies (Royal Carbon Black and Finster Carbon) in Mumbai, India.

The baled tires are processed through environmentally sound pyrolysis technology for the recovery of valuable products, including pyrolysis oil, (RCB) recovered carbon black, and steel. These materials are reintroduced into the marketplace as usable commodities, supporting responsible recycling and resource recovery efforts.

We further confirm that the market for baled tires used in pyrolysis remains strong and viable. Based on current capacity, demand trends, and projected industry growth, the pyrolysis sector is expected to continue accepting baled tire feedstock.

We are committed and anticipate a long-term relationship with Scrap Tire Solutions. If, however, Emanuel Tire stops accepting baled tires from Scrap Tire Solutions, DENREC will be notified.

Sincerely,

A handwritten signature in black ink, appearing to read "Mark Rannie", written in a cursive style.

Mark Rannie
Director
