**RE: 2026 Delaware Hazardous Waste Transporter Permit Renewal; Environmental
Waste Minimization, LLC., 14 Brick Kiln Court, Northampton, PA 18067;
DE- HW-0535**

To Whom it May Concern:

Environmental Waste Minimization, LLC. ("EWMI") is pleased to submit the enclosed Delaware Hazardous Waste Transporter Permit Renewal Application for our Permit Number DE-HW-0535.

Please find attached a check in the amount of \$1550.00 made payable to the State of Delaware which covers the five (5) year permit fee.

If you have any questions or concerns regarding the submission of this renewal application, please don't hesitate to contact me at 484-275-6900, or via electronic mail at greg.inman@triumvirate.com, or you may contact our corporate consultant Gary Howard from Compliance Plus Services, Inc. at 215-734-1414, or via electronic mail at ghoward@complianceplusservices.com.

Thank you for your attention to this permit renewal application.

Sincerely,

A handwritten signature in black ink, appearing to read 'G Inman', with a long horizontal flourish extending to the right.

HAZARDOUS WASTE TRANSPORTER PERMIT APPLICATION

Instructions: You must complete this application in its entirety and attach all applicable documentation.

(**Note:** For applicants renewing an existing permit, this application requires the submission of updated information and documentation.)

The application must be signed by the company owner or a corporate officer. A check payable to the "State of Delaware" must accompany this application.

Delaware Department of Natural Resources and Environmental Control
Compliance and Permitting Section
89 Kings Highway
Dover, DE 19901

1. Type of Permit

☐ New – Submit a check or money order, payable to the "State of Delaware," in the amount of \$350.00.

☒ Renewal: Permit # DE-HW- 535 Expiration Date 9/30/2026

Please indicate the term for which you desire your permit to be issued. Submit a check or money order, payable to the "State of Delaware," for the indicated permit fee.

☐ One Year - \$350.00

☐ Two Years - \$650.00

☐ Three Years - \$950.00

☐ Four Years - \$1250.00

☒ Five Years - \$1550.00

2. Release to Public:

Do you wish to be included on the list of transporters that is provided to persons requesting a list of Delaware permitted hazardous waste transporters? ☒ Yes ☐ No

3. Company Information:

Company Name: Environmental Waste Minimization, LLC

Location Address:	Mailing Address:
14 Brick Kiln Court	14 Brick Kiln Court
Northampton, PA 18067	Northampton, PA 18067

Contact Person: Greg Inman

Title: Director

Business Phone: 484-275-6900

Fax: 484-275-6970

E-mail: Greg.Inman@Triumvirate.com

24 hr. Emergency Phone: 484-275-6900

EPA Identification Number: PAR000501577

Employer's Federal Tax ID Number: 23-2827092

4. Type of Company: (Check One)

☐ Proprietorship

☐ Partnership

☐ Corporation – City, State and Date of Incorporation: _____

☐ Municipality

☐ Public Institution

☒ Other – Explanation: Limited Liability Company

5. Parent Company Information:

Parent Company Name: Triumvirate Environmental Inc.

Parent Company Address: 200 Inner Belt Road
Somerville, MA 02143

6. Ownership/Stockholder Information:

For each owner, partner, or corporate officer, list the name, title, home address, and date of birth.

☒ List of owners, partners, or corporate officers: Attachment I

List the name and address of all stockholders owning greater than 5% outstanding shares.

☒ List of stockholders: Attachment I

☐ Not Applicable

7. Company Affiliations:

List all other companies owned by the same owners, corporate officers, or parent company that are engaged in the business of solid or hazardous waste transportation, treatment, storage, disposal, recovery, or reclamation.

- ☒ List of company affiliates: Attachment II
☐ No company affiliates

8. Type of Hazardous Waste to be Transported:

Indicate the waste types to be transported. (Note: Characteristic and listed hazardous wastes identified in Delaware's *Regulations Governing Hazardous Waste* (DRGHW) Part 261 are equivalent to RCRA 40 CFR Part 261 wastes.) Check all that apply.

- ☒ Part 261 characteristic or listed hazardous wastes
☒ Used or waste oils (as defined by Part 279, Used Oil Management Standards)
☒ Spent antifreeze exhibiting a characteristic of hazardous waste
☒ PCB-contaminated hazardous waste
☒ Spent fluorescent lighting tubes and ballasts when managed as non-universal waste

9. Treatment, Storage, and Disposal Facilities:

List all treatment, storage, and disposal facilities that have agreed to accept the hazardous wastes identified above.

- ☒ List of treatment, storage, and disposal facilities: Attachment III

10. Other Transporter Permits:

List all hazardous waste transporter permits held in other states.

- ☒ List of transporter permits: Attachment IV
☐ No hazardous waste transporter permits held in other states

11. Federal DOT and Motor Carrier Numbers:

Indicate your Federal DOT number and Motor Carrier number:

DOT# 781684 MC# 1539899

12. Proof of Insurance:

The transporter identified in this application must meet or exceed minimum insurance requirements as set forth in DOT Title 49 CFR Part 387. The DNREC Compliance and Permitting Section must be identified as the certificate holder. Also include a current MCS-90 endorsement or affirmation that the endorsement is still in effect.

- ☒ Certificate of insurance and MCS-90: Attachment V

13. Spill Control and Safety Equipment:

List all spill control and safety equipment that will be carried on each vehicle.

☒ List of spill control and safety equipment: Attachment VI

14. Spill Control Plan:

Attach a copy of the Spill Control Plan that describes prevention, containment, and clean up procedures during transportation. The plan must demonstrate compliance with the requirements outlined in DRGHW Sections 263.30, 263.31, and 263.105. **Spill Control Plans must contain the following Delaware Emergency Reporting Telephone Numbers: 1-800-662-8802 and 302-739-9401.**

☒ Spill Control Plan: Attachment VII

15. Driver Training:

Attach a copy of your driver training program. All drivers must be trained in current DOT Motor Carrier Safety Regulations and have knowledge of the proper handling procedures for the type of waste transported, the hazardous waste manifest system, and safe vehicle operation as provided in 49 CFR Parts 383, 390 – 399, and DRGHW Section 263.104. All drivers must be familiar with the approved Spill Control Plan.

☒ Driver Training Program: Attachment VIII

16. Controlled Substance Testing:

Do you maintain a controlled substance testing program for drivers in your employment (including contract drivers) in compliance with Federal DOT 49 CFR Part 391?

☒ Yes

☐ No, Explain:

17. Vehicle Identification Information:

List all vehicles to be used for the transportation of hazardous waste into, out of, or through Delaware. You may use the form provided or another printout that contains all required information.

☒ Vehicle Identification Information: Attachment IX

18. Environmental Record:

List all criminal citations, arrests or convictions, civil or administrative violations, and civil or administrative enforcement actions, and the disposition(s) thereof for the violation or alleged violation of any environmental statute, regulation, permit, license, approval, or order, regardless of the state in which it occurred. Indicate whether it was a local, state, or federal violation or alleged violation. List all such items for the applicant, and if the applicant is other than an individual, for any employee while employed by the applicant or any partner, officer, or director of the applicant as an individual or for any other former business of such partner, officer, or director. For civil or administrative violations or alleged violations, list all such items for the last five (5) years from the date of application.

- ☒ Environmental Record: Attachment X
☐ Not Applicable – No violations within the specified time period

19. Signature:

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this application and all attachments, and that upon personal knowledge and information, the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information.

Signature of legal owner or corporate officer

Please note, the expiration date as stated on this form relates to the process for renewing the Information Collection Request for this form with the Office of Management and Budget. This requirement to collect information as requested on this form does not expire. For questions, please contact the Office of Registration, Financial Responsibility Filings Division.

A Federal Agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB Control Number. The OMB Control Number for this information collection is 2126-0008. Public reporting for this collection of information is estimated to be approximately 2 minutes per response, including the time for reviewing instructions, gathering the data needed, and completing and reviewing the collection of information. All responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Information Collection Clearance Officer, Federal Motor Carrier Safety Administration, MC-RRA, Washington, D.C. 20590.

Endorsement for Motor Carrier Policies of Insurance for Public Liability
under Sections 29 and 30 of the Motor Carrier Act of 1980

FORM MCS-90

Issued to Environmental Waste Minimization, LLC of Pennsylvania 781684
(Motor Carrier name) (Motor Carrier state or province) (USDOT Number)

Dated at 12:00 midnight on this 4th day of March, 2026

Amending Policy Number: IEELCASCEN8F005 Effective Date: 2/27/2026

Name of Insurance Company: IRONSHORE SPECIALTY INSURANCE COMPANY

Countersigned by: Stephanie Delaney
(authorized company representative)

Digitally signed by Stephanie Delaney
Date: 2026.03.04 09:08:24 -06'00'

The policy to which this endorsement is attached provides primary or excess insurance, as indicated for the limits shown (check only one):

- ☐ This insurance is primary and the company shall not be liable for amounts in excess of \$ _____ for each accident.
- ☒ This insurance is excess and the company shall not be liable for amounts in excess of \$ 3,000,000 for each accident in excess of the underlying limit of \$ 2,000,000.00 for each accident.

Whenever required by the Federal Motor Carrier Safety Administration (FMCSA), the company agrees to furnish the FMCSA a duplicate of said policy and all its endorsements. The company also agrees, upon telephone request by an authorized representative of the FMCSA, to verify that the policy is in force as of a particular date. The telephone number to call is: 715-261-5744.

Cancellation of this endorsement may be effected by the company or the insured by giving (1) thirty-five (35) days notice in writing to the other party (said 35 days notice to commence from the date the notice is mailed, proof of mailing shall be sufficient proof of notice), and (2) if the insured is subject to the FMCSA's registration requirements under 49 U.S.C. 13901, by providing thirty (30) days notice to the FMCSA (said 30 days notice to commence from the date the notice is received by the FMCSA at its office in Washington, DC).

Filings must be transmitted online via the Internet at <https://www.fmcsa.dot.gov/registration>.

DEFINITIONS AS USED IN THIS ENDORSEMENT

Accident includes continuous or repeated exposure to conditions or which results in bodily injury, property damage, or environmental damage which the insured neither expected nor intended.

Motor Vehicle means a land vehicle, machine, truck, tractor, trailer, or semitrailer propelled or drawn by mechanical power and used on a highway for transporting property, or any combination thereof.

Bodily Injury means injury to the body, sickness, or disease to any person, including death resulting from any of these.

Property Damage means damage to or loss of use of tangible property.

Environmental Restoration means restitution for the loss, damage, or destruction of natural resources arising out of the accidental discharge, dispersal, release or escape into or upon the land, atmosphere, watercourse, or body of water, of any commodity transported by a motor carrier. This shall include the cost of removal and the cost of necessary measures taken to minimize or mitigate damage to human health, the natural environment, fish, shellfish, and wildlife.

Public Liability means liability for bodily injury, property damage, and environmental restoration.

The insurance policy to which this endorsement is attached provides automobile liability insurance and is amended to assure compliance by the insured, within the limits stated herein, as a motor carrier of property, with Sections 29 and 30 of the Motor Carrier Act of 1980 and the rules and regulations of the Federal Motor Carrier Safety Administration (FMCSA).

In consideration of the premium stated in the policy to which this endorsement is attached, the insurer (the company) agrees to pay, within the limits of liability described herein, any final judgment recovered against the insured for public liability resulting from negligence in the operation, maintenance or use of motor vehicles subject to the financial responsibility requirements of Sections 29 and 30 of the Motor Carrier Act of 1980 regardless of whether or not each motor vehicle is specifically described in the policy and whether or not such negligence occurs on any route or in any territory authorized to be served by the insured or elsewhere. Such insurance as is afforded, for public liability, does not apply to injury to or death of the insured's employees while engaged in the course of their employment, or property transported by the insured, designated as cargo. It is understood and agreed that no condition, provision, stipulation, or limitation contained in the policy, this endorsement, or any other endorsement thereon,

or violation thereof, shall relieve the company from liability or from the payment of any final judgment, within the limits of liability herein described, irrespective of the financial condition, insolvency or bankruptcy of the insured. However, all terms, conditions, and limitations in the policy to which the endorsement is attached shall remain in full force and effect as binding between the insured and the company. The insured agrees to reimburse the company for any payment made by the company on account of any accident, claim, or suit involving a breach of the terms of the policy, and for any payment that the company would not have been obligated to make under the provisions of the policy except for the agreement contained in this endorsement.

It is further understood and agreed that, upon failure of the company to pay any final judgment recovered against the insured as provided herein, the judgment creditor may maintain an action in any court of competent jurisdiction against the company to compel such payment.

The limits of the company's liability for the amounts prescribed in this endorsement apply separately to each accident and any payment under the policy because of anyone accident shall not operate to reduce the liability of the company for the payment of final judgments resulting from any other accident.

1.0 Introduction and Summary Overview

This Transportation Spill Contingency Plan (“Contingency Plan”) details the procedures that will be utilized by Environmental Waste Minimization, LLC. (“EWMI”) in the event of an emergency such as a spill, accident, fire or explosion. This Contingency Plan also describes the general policies and procedures which EWMI has instituted to 1) prevent potential spills and incidents before they occur; and 2) ensure that their drivers are prepared to properly respond to a spill or incident if and when it does occur.

The Contingency Plan is intended to comply with EWMI’s obligations as a hazardous waste/hazardous materials transporter as specified by the U.S. Environmental Protection Agency (EPA) under 40 CFR Part 263 and the U.S. Department of Transportation (USDOT) under 49 CFR Part 171 through 180. In addition, this Plan was also developed to meet the Company’s relevant obligations as specified by those states in which EWMI is licensed to transport hazardous and solid waste.

Proper adherence to the procedures outlined in this Contingency Plan is required of all EWMI employees that engage in activities that directly affect the safe transportation of hazardous materials (i.e., Hazmat employees as defined in 49 CFR 171.8) and regulated medical wastes. These procedures are intended to prevent and control the accidental discharge of hazardous chemicals or polluting materials into the environment (i.e., to the ground, air, surface water or to groundwater). Additionally, EWMI intends to ensure that the necessary measures are implemented to minimize and/or abate any potential hazards to human health and the environment from fires, explosions or release of hazardous or solid wastes, or hazardous constituents.

Copies of the Contingency Plan will be maintained on each transport vehicle used to ship hazardous wastes, hazardous materials and regulated medical wastes. In addition, a copy of the Contingency Plan will also be kept at EWMI’s home dispatch/terminal location, the company’s main office headquarters, and will be made available to the appropriate local Fire and Police jurisdictions, if required.

2.0 Description of General Operations and Procedures to Prevent Spills

The following sections outline the general transportation operations and the procedures that EWMI has implemented to prevent or minimize accidental spills or discharges which could occur during the course of transporting hazardous wastes, and hazardous materials. This section also provides a general review of the actions that are to be taken in the event of a spill or release of hazardous wastes or hazardous substances. Further details of the specific response actions to be taken in the event of a spill, fire or release are provided in Sections 3.0 and 4.0 below.

2.1 Organizational Structure and Employee Responsibilities

Provided below is a list of the key positions or job functions at EWMI involved in the transportation of hazardous wastes, and hazardous materials. These following sections identify the primary duties and/or functions that each of these positions is responsible for in the event of an incident involving a spill, discharge, fire or explosion.

2.1.1 Operations Manager

The Operations Manager is responsible for the overall coordination of projects and assignments related to EWMI's waste management, transportation, and lab pack services. His primary responsibility is to ensure that waste pickups, shipments and transportation services are properly scheduled and coordinated to service EWMI's clientele. The Operations Manager is also responsible to ensure that EWMI's field chemists and technicians are properly trained and qualified to ensure that the wastes transported by EWMI are properly classified, packaged and shipped in accordance with USDOT and EPA regulatory provisions.

2.1.2 Field Chemists and Technicians

EWMI uses highly skilled Field Chemists and Technicians to package and classify wastes that are generated at a client's site prior to shipment to an appropriate waste management facility. These positions engage in determining if the materials for shipment are properly packaged, labeled and marked in accordance with federal and state regulatory requirements. These individuals are sufficiently trained to complete the appropriate shipping documents and manifests for the wastes to be transported. Finally, the Field Chemists and Technicians may also engage in the proper loading of the shipment for transport on the highway.

2.1.3 Drivers

Drivers have the primary responsibility to ensure that the waste shipments that they transport are properly packaged, marked, labeled, placarded and loaded in accordance with federal and state regulations. In addition, the drivers are the primary individuals who are responsible for implementing the procedures and initial notifications required under this Contingency Plan.

2.1.4 Emergency Response Coordinators (ERCs)

The designated Emergency Response Coordinators are the principal EWMI agents that will coordinate and ensure that appropriate responses and actions are taken in the event of a spill, accident, fire or explosion. The ERCs will ensure that all of the appropriate emergency response agencies and state and local regulators are properly notified in accordance with this Contingency Plan. In addition, the ERC will be responsible for ensuring that any EWMI employees that are on the scene are taking the necessary actions to control the hazard area and implementing any appropriate response actions to minimize any potential threat that may be posed to the surrounding environment and general public safety.

2.1.5 Health and Safety Manager

The Health and Safety Manager for EWMI will be responsible for training EWMI employees in the various response and safety aspects of this Contingency Plan as well as providing instruction in the proper use and maintenance of any required safety or emergency response equipment. The Health and Safety Manager will also provide assistance and work with the ERC to ensure that any actions taken at the scene of a fire, spill or other transportation incident are conducted in accordance with recognized industry safety guidelines and practices.

2.2 Proper Operating Procedures and Requirements

All EWMI transport vehicles will be operated and maintained so as to be in compliance with all state and federal regulations and not present a hazard through unsafe vehicle conditions. In addition, all vehicles will be equipped and operated to prevent leakage of wastes to the environment. Accordingly, drivers must ensure that open-bodied vehicles, such as roll-offs, are fully covered by a tarpaulin or other such device so as to prevent materials from blowing or scattering during transport to prevent any discharge or release to the environment.

Drivers are expected to ensure that hazardous wastes are not accepted for transport when:

- The hazardous waste waste shipment does not match the waste description contained on the manifest or relevant shipping document;
- The waste containers are leaking or are damaged in a way that will allow leakage or otherwise pose a potential for release of the waste while in transit (damage drums may be over-packed or transferred to another suitable container in order to accept them for shipment); and
- The waste containers have not been properly labeled or marked as required under state and federal regulations.

To prevent the improper acceptance of hazardous waste that are not suitable or ready for shipment, the driver must carefully inspect each shipment before signing to accept the waste on the manifest

or shipping document. Accordingly, prior to transporting any hazardous waste, hazardous materials, drivers will be required to complete the appropriate Pre-Transportation Shipment Checklist.

Described in the following sections are the routine regulatory provisions that are required to be met during the transportation of hazardous wastes and regulated medical wastes. These include DOT safety inspections, vehicle placarding, hazardous waste manifests, proper labeling and marking of containers, handling/loading procedures, and securing shipments.

2.2.1 DOT Inspections (49 CFR. Part 396)

A DOT pre-trip vehicle inspection is required to be complete prior to using any commercial motor vehicle on the road. This is particularly important prior to carrying hazardous materials, hazardous wastes and regulated medical wastes. In addition to the pre-trip inspection, tires are required to be inspected at the beginning of each trip and each time the vehicle is parked, as per 49 CFR 397.17. This inspection is performed to ensure the tires do not overheat causing failure or possible fires. Accordingly, each EWMI driver must inspect his/her vehicle prior to using the truck and at the intervals specified here to avoid possible accidents or emergency situations.

2.2.2 Placarding

Every transportation carrier is responsible for the required hazardous material placarding on each end and each side with the type of placarding specified 172.519 of Title 49-Transportation.

The following classifications of hazardous materials require placarding when transported in any quantity: 1.1, 1.2, 1.3, 2.3, 4.3, 6.1 Zone A, 7.

The following classifications of hazardous materials require placarding when transported in quantities greater than or equal to 1,000 lbs., or in combinations of 1,000 or more: 1.4, 1.5, 1.6, 2.1, 2.2, 3, 4.1, 4.2, 5.1, 5.2, 8.

The "Dangerous" placard may be used in place of the separate hazardous class placarding specified as above. However, when 1,000 kg or more of one class of material is loaded at one loading facility, then the placard specified for the classes listed above must be applied. A combination of the placard for the class of material 1,000 kg or more and a "Dangerous" placard for the class or classes of materials less than 1,000 kg may be used.

Remove all placards when the hazardous materials, hazardous wastes or regulated medical wastes have been properly off-loaded (certain bulk containers, such as cargo tanks, may have to be washed out before the placard may be removed). Reference 49 CFR 172.504 for additional information.

2.2.3 Hazardous Waste Manifest

Hazardous Waste Manifest is required for all hazardous waste shipments in accordance with 40 CFR Part 262. The general information required is as follows:

- Item 1.** Generator's US EPA ID Number
- Item 2.** Page 1 of _____
- Item 3.** Emergency Response Phone Number
- Item 4.** Manifest Tracking Number
- Item 5.** Generator's Name, Mailing Address, and Phone Number. There is also a section for the Generator's Site Address (if different from the mailing address).
- Item 6.** Transporter 1 Company Name - Enter the complete company name and EPA ID number of the first transporter who will transport the waste.
- Item 7.** Transporter 2 Company Name - Enter the complete company name and EPA ID number of the first transporter who will transport the waste (if applicable).
- Item 8.** Designated Facility Name, Site Address, Phone Number, and EPA ID number - Enter the complete company name and complete site address of the facility designated to receive the waste listed on this Manifest. The address must be the site address, which may differ from the

mailing address.

Item 9a. Hazardous Material (HM) column.

Item 9b. US DOT Description [Including Proper Shipping Name, Hazard Class, and ID Number (UN/NA Number)] - Enter the US DOT Proper Shipping Name, Hazard Class, and ID Number (UN/NA Number) for each waste as identified in 49 CFR 171 through 177.

Item 10. Containers (No. and Type) - Enter the number of containers for each waste and the appropriate abbreviation for the type of container.

Item 11. Total Quantity - Enter the total quantity of each waste.

Item 12. Unit (Wt/Vol) - Enter the appropriate abbreviation for the unit of measure.

Item 13. Waste Codes - Enter the appropriate EPA Waste Codes that apply to the waste.

Item 14. Special Handling Instructions and Additional Information.

Item 15. Generator/Officer's Certification: Certification of receipt of hazardous materials covered by this manifest. Print or type the name of the person accepting the waste on behalf of the owner or operator of the facility. Sign and enter the date of receipt.

Item 16. Applies to International Shipments

Item 17. Transporter 1 and Transporter 2 Acknowledgment of Receipt of Materials - Print or type the name of the person accepting the waste on behalf of the transporter. Sign and enter the date of receipt.

Item 18a: Discrepancy Indication Space: Noted by the Designated Facility's Authorized representative.

Item 18b: Alternate Facility or Generator Space: Must be completed in the event of a rejected load or residue in quantities greater than the RCRA allowance.

Item 18c: Signature Section: Signed by an authorized representative of the Destination facility, or by the generator, whom is accepting the rejected load.

2.2.4 Labeling and Marking (Ref. 49 CFR 172.300 and .400)

As required by USDOT, each person who offers a package, over pack, or freight containers containing hazardous material for transportation shall affix the appropriate markings and labels as required under 49 CFR Subparts D and E (172.300 and 172.400 respectively). The hazard labels prescribed for each material are specified in the Hazardous Materials Tables under Section 172.101. Please note that hazardous and regulated medical wastes have special labeling requirements in addition to those specified by USDOT. These requirements vary by state. Drivers with any questions related to the proper labeling and marking requirements for containers they are required to transport should check with their supervisor or EWMI's Operations Manager.

It is the responsibility of the carrier to insure that all shipments are correctly marked and labeled prior to acceptance of the shipment. Once the driver accepts the shipment for transportation, both shipper and carrier are equally responsible for any and all irregularities in the handling of that shipment.

The transporter is responsible for replacing any labels that become torn or missing or inappropriate during transport. Environmental Waste Minimization, LLC. will ensure that all labels and marking are in good condition prior to loading the vehicle.

The transporter, in addition to checking each package for proper marking and labeling before shipment, must determine that the shipment containers are not damaged or leaking. All paperwork must be verified with the shipment and all proper signatures must be in place.

2.2.5 Handling/Loading

Loading hazardous materials is a critical part of the overall handling of these materials. Errors in judgment made during loading can have serious consequences for both personnel and the shipment itself. The following guidelines must be adhered to regarding the loading

of hazardous materials:

As hazardous materials are loaded, inspect each package and/or container for damage or leakage. If damaged or leaking containers/packages are discovered, DO NOT LOAD THOSE PACKAGES. Immediately contact the generator's representative for the pickup location and inform them of the leaking container. The generator must repackage or over-pack the container before you can accept it for shipment. All leaking containers must remain with the generator unless they can be repackaged or over-packed. Never accept a leaking container. Inspect each container thoroughly before accepting it for shipment.

- Work carefully and cautiously to avoid breakage and damage to hazardous materials. Handle marked hazardous materials in accordance with any special marking (i.e., THIS SIDE UP, etc.). Do not bump, drop or jar hazardous materials.
- All hazardous materials that are loaded must be properly segregated in the transport vehicle to prevent the possibility of commingling of incompatible materials in the event of a leak or accident. Note, regulated medical wastes must be transported separately from other waste materials.
- Count and check all shipments closely during loading to ensure matching with shipping papers. Verify both numbers and types of items loaded on each vehicle.
- Make certain the transport unit is blocked or chocked during the loading process - especially if a forklift is being used to load.
- Report all problems to the appropriate supervisor AS SOON AS THEY HAPPEN. Do not be responsible for allowing a LITTLE PROBLEM TURN INTO A BIG ONE.

- Leaking drums are a problem no matter at which stage of the shipping or transporting chain they are discovered. The basic rule underlying the handling of leaking containers is quite simple: Leaking drums may not be accepted for transportation.
- Problems often arise in the handling of leaking drums when a transporter arrives at the processing or disposal facility and, during unloading, finds a container in the shipment has begun to leak. Several options are available at this point, two of which are:
 - The processing/disposal facility can take the leaking drum and repair and/or repackage it;
 - The processing/disposal facility can refuse to accept the leaking drum which puts the responsibility on the transporter.

2.2.6 Securing Loads

EWMI will ensure that all containers transported in vehicles are properly secured using load locks or similar devices. Care must be taken when loading containers to ensure that lids and bungs are tightly sealed to prevent accidental leakage of hazardous materials.

2.3 Personnel Training and Qualifications

All EWMI personnel that engage in aspects of hazardous waste transportation will be properly trained in accordance with state and federal regulatory requirements. The specific training that will be provided is outlined in Section 6.0 below. In addition, only drivers who qualify under federal motor carrier safety regulations may operate vehicles containing hazardous material.

2.4 Equipment Maintenance and Inspection

All vehicles used to transport hazardous waste, hazardous materials and regulated medical waste shall be periodically inspected in accordance with the federal commercial vehicle inspection requirements specified in 49 CFR Part 396. Further, all safety and emergency response equipment will be maintained and inspected in accordance with the manufacturer's recommendations or industry recognized guidelines and practices. Inspection and maintenance records will be maintained at EWMI principal dispatch offices.

Vehicles that are used to transport infectious or chemotherapeutic wastes must be cleaned or decontaminated at least weekly. Following the cleaning, EWMI will complete the Infectious/Chemotherapeutic Waste Transportation Vehicle Decontamination and Disposal Record to document the maintenance and condition of the vehicle (see Appendix 4 of this Plan).

2.5 Revisions to the Contingency Plan

The Contingency Plan will be periodically reviewed and updated if necessary. As a minimum, the Contingency Plan will be reviewed and/or revised when:

- The applicable regulations are revised;
- The Plan fails in an emergency;
- The mode of operations change in a manner that materially increases the potential for fires, explosions or releases of hazards constituents, or changes the response necessary in an emergency;
- The list of Emergency Response Coordinators changes;
- The list of Emergency Equipment changes; or
- When required by a state or federal regulatory agency or department.

3.0 Spill Response Procedures

Provided below are a list of the specific actions that must be taken at a spill scene by representatives of EWMI.

3.1 Spill Containment

The critical problem is to prevent the escape of any spilled liquid or solid into the ground or into a storm or sanitary sewer. A barrier must be erected immediately to prevent escape of spilled materials/waste liquids, using whatever material is at hand, even a dirt curb to prevent spreading of the spill. Containment of solids will be dependent on wind and weather conditions. Use all spill kit material as needed. Simultaneously, the source of the spill or leak must be located and controlled (drum plugged or taped) or placed in an over-pack.

The possibility of evacuation should be considered in the event of a major spill that could cause serious injury to human life or where a continuing exposure could be harmful to health. Major concerns involve ignitable wastes that may catch fire and possibly explode or generate toxic fumes. If fire threatens or actually occurs, personnel should be evacuated initially a distance of 150' in all directions as recommended by the Emergency Response Guidebook ("ERG"). If a large fire ensues, a protective downwind distance of 1000' is recommended. If the fire includes a tanker truck, evacuate personnel to a distance up to ½ mile is recommended. If no fire threatens, and no container(s) have ruptured, a distance of 50' to 100' should suffice. For a spill of toxic materials, initially a distance of 150' in all directions for liquids and 75' for solids is recommended. Consult *Table 1 – Initial Isolation and Protective Action Distances* in the ERG for each particular toxic chemical spilled and follow the guidelines. If a chemical or material is not listed in Table 1, follow the Public Safety Guidelines for the particular chemical as recommended in the ERG.

If shipping description is known (refer to manifest) find the name in your Emergency Response Guidebook in the blue pages and turn to the corresponding guide number (orange top page - last 1/3 of book). If the shipping description is known check the placard on the vehicle for a "UN" or "NA" number, look up the number in the Yellow Pages and refer to the corresponding guide number; or contact the generator of the waste for safety data.

3.2 Spill Cleanup

With containment effected and the spillage source controlled, clean-up is the next step. If the spill is contained on an impervious paved surface, material should be absorbed onto a compatible material (e.g. sand diatomaceous earth). Any of a number of commercial absorbent inert materials may be used, but make sure they are compatible with the waste and will not cause a reaction. If the spillage has reached earth, all contaminated dirt should be collected into drums or bags for disposal at an approved facility or site.

If any spilled waste has reached the ground, the contaminated soil will be removed. The extent of contamination will be determined by sampling the spill area.

The sample will be analyzed by a qualified lab. Sampling techniques, chain-of custody requirements and analytical methods will follow approved procedures such as those outlined in SW-846. Any soil exhibiting contamination above the local background level will be removed to an appropriate permitted disposal site.

In addition to contaminated absorbents, dirt or the like as noted above, damaged containers also present a disposal problem, special "recovery drums" will be used for containing damaged 55-gal drums. Disposal will be at an approved site.

4.0 Emergency Response Action Plan

Provided below are the minimum emergency response procedures that EWMI will implement under this Contingency Plan in the event of a spill, fire, explosion or discharge of a hazardous waste constituents. A complete list of Emergency Response Agency contacts is included in Appendix 2 of this Contingency Plan.

4.1 Emergency Reporting

In the event of an emergency or a hazardous waste spill during transportation, EWMI will

immediately notify the State environmental agency of the state in which the incident occurs, see section 4.2 and Appendix 2 for list of State contact information, and the National Response Center with the following information:

- Name of the person reporting the incident.
- Name, address, and the EPA identification number for EWMI as the transporter.
- Phone number where the person reporting the incident can be reached.
- The date, time and location of the incident.
- The Mode of transportation and type of transport vehicle.
- A brief description of the incident, including the type of incident.
- For each waste involved in the spill:
 - The name and EPA identification number of the generator of the waste.
 - Shipping name, hazard class and UN or NA number of the waste.
 - Estimated quantity of the material or the waste spilled.
 - The extent of the contamination of land, water, or air.
- Shipping name, hazard class, and the UN or NA -number of any other material carried on the transport vehicle.

In the event of an emergency or hazardous waste or regulated medical waste spill during transportation, EWMI will also immediately notify the affected municipality of the occurrence and the nature of the spill. Spills or releases of regulated medical wastes must be reported to these entities as soon as practicable, or within one hour

If the release involved a material that is classified as a hazardous material, EWMI must submit a report of the incident in writing as required by 49 CFR 171.16 to the:

Director, Office of Hazardous Materials Regulations
Materials Transportation Bureau
Dept. of Transportation
Washington, DC 20590

And, send copies of the report to the CT Department of Energy and Environmental Protection at:
Connecticut Department of Energy and Environmental Protection

79 Elm Street

Hartford, Connecticut 06106-5127

And/Or the appropriate state environmental agency, and to the generator.

4.2 Notification List of Emergency Response Agencies

When a spill or incident occurs, the Agencies listed in Appendix 2 of this Plan must be immediately notified with the information as provided in Section 4.1 above.

4.3 List of Emergency Response Coordinators

At all times, EWMI maintains at least one employee either at the main terminal location or on-call with the responsibility for coordinating all emergency response measures. The emergency response coordinator is thoroughly familiar with all aspects of the Contingency Plan, all operations and activities, the characteristics of all materials handled and the location of all records. In addition, this individual has the authority to commit the resources necessary to carry out the Contingency Plan.

List of Emergency Coordinators

Emergency Coordinator	Address	Telephone Numbers
Primary Emergency Coordinator: Scott Soden	14 Brick Kiln Court Northampton PA 18067	Work: 484-275-6945 [REDACTED]
Secondary Emergency Coordinator: Matt Smith	14 Brick Kiln Court Northampton PA 18067	Work: 484-275-6978 [REDACTED]
Alternate Emergency Coordinator: Jon Al-Khal	14 Brick Kiln Court Northampton PA 18067	Work: 484-275-6904 [REDACTED]

4.4 Emergency Response Contractors

EWMI is a full service waste management firm with a vast array of capabilities including remedial

responses and contract services for disposal of any materials that may be generated as a result of a spill or incident that occurs during transportation. Accordingly, EWMI can mobilize earth moving equipment, technicians, waste containment equipment such as booms and sorbent pad, drums, over-packs, field monitoring and measurement equipment, etc. to conduct or support any eventuality that occurs on the road.

In addition to EWMI's in-house response capabilities, the company has agreements with two emergency response contractors that will also be available to respond to an incident or spill during transportation. Both contractors are experienced and have completed projects for a number of large companies along the eastern United States. These companies respond to hazardous waste, hazardous materials and regulated medical waste incidents and can provide personnel, equipment, and transportation services to respond to an incident. EWMI has researched their capabilities and in-house equipment reserves and is satisfied that the contractor's performance will be more than adequate to respond to a transporter incident on its behalf. These contractors may also be used singularly or jointly.

The Emergency Response Contractors selected are listed below. All equipment is tested and maintained as necessary to ensure its proper operation in the event of an emergency. After an emergency, all equipment will be decontaminated, cleaned and fit for its intended use before normal operations resume. For spills in Connecticut, a Connecticut State licensed spill contractor will be used for emergency response and clean up.

List of Outside Emergency Response Contractors

Name of Outside Contractor	Address of Contractor	Telephone Number
Rapid Response, Inc.	14 Brick Kiln Court Northampton, PA 18067	484-275-6900 877-460-1038
Haz-Mat One	1203 S. Parker Street Olathe, KS 66061	800-229-5252
NRC (24-Hour Emergency Response)	3500 Sunrise Highway Suite 200, Building 300 Great River, NY 11739	877-880-4672

4.5 List of Emergency Response Equipment

Provided in Appendix 3 is a list of the minimum emergency and safety equipment that is carried on all EWMI vehicles. This equipment includes the driver's personal protection equipment.

4.6 External Communications

All drivers or vehicle operators are issued cellular phones and two-way radios for emergency communications.

5.0 Routine Decontamination Procedures

EWMI routinely cleans out its vehicles and trucks by sweeping the interior of the unit and collecting the dust generated for proper classification and disposal. This decontamination is usually completed at its home terminal location; however, the trucks may also be cleaned out in the vehicle unloading areas at one of the destination hazardous waste facilities. Generally, these trucks are used for transporting the primary container and are not routinely exposed to the hazardous waste during transport unless there was a spill or incident.

As previously indicated, trucks that are used to transport Hazardous waste are cleaned weekly as a matter of routine. A Decontamination and Disposal Record that is used to document the cleaning procedure is provided in Appendix 4. In the event of a spill or release of Hazardous waste in the vehicle, EWMI will clean/decontaminate the vehicle prior to the unit being placed back into service.

General waste handling equipment will be decontaminated in the following manner: Each item used will be placed in an open head container and thoroughly rinsed with a compatible solvent or cleaning compound. The residue or wash water will then be drained into a tight head container, sealed, and disposed of in accordance with federal and state regulations at an authorized disposal site. Again, these items are typically cleaned at EWMI's home terminal.

EWMI generally uses disposable overalls or protective clothing when conducting routine

hazardous waste operations. The disposal clothing will be placed with any other cleanup residue and disposed of in accordance with federal and state regulations at an authorized disposal site. If the clothing is reusable, then it will be decontaminated properly and the residue will be properly disposed of in accordance with applicable regulatory requirements.

6.0 Employee Training Program

In preparation for handling hazardous materials, hazardous wastes and regulated medical wastes, all operational employees receive classroom training, conducted by either EWMI's Safety Manager, or an outside consultant firm, in conjunction with the required DOT, OSHA, and RCRA training. All personnel are properly supervised and instructed for their related job requirements.

Personnel are trained in proper hygiene and safety techniques for handling hazardous materials. The following is a list of classroom training provided to all personnel responsible for the handling of hazardous materials:

- Chemical, Physical, and Biological Health Hazards
- Hazardous Waste Manifesting
- Container Receiving and Maintenance
- Container Inspections
- Container Transferring
- Container Pick-up Checklist
- Re-use of Containers for Hazardous Waste
- Emergency Response Equipment
- Emergency Procedures
- Hazardous Waste Labeling
- Product Compatibility
- In-house Maintenance Checks
- Emergency Spills

All drivers of industrial equipment are properly qualified and licensed as required by state and federal USDOT (physical examinations are required for qualification). Since much of the drivers'

actions involve hazardous materials, including hazardous wastes, their instructions specifically include:

- Inspection of their vehicles before and during trips,
- Knowledge of safety and health hazards of products carried (e.g., flammable, corrosive), and
- Actions to be implemented in case of spills, accidents, or other emergencies involving hazardous material, hazardous wastes and regulated medical wastes.

Personnel are briefed for each individual job of the hazards, safety requirements, and job responsibility. Employees are properly trained for use, operation, and maintenance of their respirators and SCBA breathing equipment.

All personnel (drivers and field remediation technicians) are provided 40-hour training in accordance with OSHA 29 CFR 1910.120 Hazardous Waste Operations, Health & Safety Training Program for Workers. These employees are given the annual 8-hour refresher course as required. The Field Services personnel are also trained in confined space entry.

EWMI periodically provides a CPR/First Aid course (min 8 hrs.).

Operators of industrial service equipment also have a copy of the following books:

- Federal Motor Carrier Safety Regulations
- Hazardous Material Guide-U.S. (49-CFR)
- Emergency Response Guidebook

The following publications are kept at our office:

- Coast Guard PPC Plans and 33-CFR
- Code of Federal Regulations Titles 29, 40, and 49
- Hazardous Materials Handling Guide - J.J. Keller
- Hawley's Condensed Chemical Dictionary
- Aldrich Catalog Handbook of Fine Chemicals

- NIOSH Pocket Guide to Chemical Hazards

Safety Data Sheets for materials shipped are carried with the manifest or are kept on file.

Each truck carries a copy of the Transporter Spill Contingency Plan. The Transporter Spill Contingency Plan is reviewed with the drivers in training classes.

Appendix 1

Pre-Transportation Shipment Checklist

PRE-TRANSPORTATION SHIPMENT CHECKLIST

CHECKLIST ITEM	YES	NO
1. Are the shipping papers properly completed for the waste load to be transported for such things as proper DOT name; labeling; hazard class; UN/NA number; etc.?	☐	☐
2. Has the transport vehicle been visually inspected for safety and road worthiness prior to leaving to pick up the waste and prior to leaving the facility for the destination facility?	☐	☐
3. Has the waste shipment been inspected for proper labeling, placarding and marking?	☐	☐
4. Were the drums or containers inspected to ensure that they are in good condition and safe for transport?	☐	☐
5. Were the drums or containers counted and verified against the manifest or shipping document?	☐	☐
6. Have all of the drums or containers been properly secured so as to prevent load shift while in transit?	☐	☐
7. Has the proper placarding been used on the transport vehicle?	☐	☐
8. Has the manifest or shipping document been checked for accuracy against the waste being transported and properly signed by the generator and all applicable transporters?	☐	☐
9. Does the shipping document designate an emergency response contact telephone number as required by 49 C.F.R. 172.604?	☐	☐

N:\#0158 - EWM\EWMI - Transporter Permit Information\Transporter Contingency Plan\Pre-Trans Shipment Checklist.docx

PRE-TRANSPORTATION SHIPMENT FOR INFECTIOUS OR CHEMOTHERAPEUTIC WASTES CHECKLIST

***Note: All negative findings on the checklist must be corrected before the waste can be accepted for transportation. Check with your supervisor for specific instructions.**

CHECKLIST ITEM		YES	NO
1.	Are all copies of the manifest legible?	☐	☐
2.	Has the transport vehicle been visually inspected for safety and road worthiness prior to leaving to pick up the waste and prior to leaving the facility for the destination facility?	☐	☐
3.	Has the waste shipment been inspected for proper labeling, placarding and marking?	☐	☐
4.	Were the drums or containers inspected to ensure that they are in good condition and safe for transport? (rigid, leak proof, impervious to moisture, sufficient in strength to prevent puncturing, tearing or bursting during transportation - bags meeting the requirements of 25 PA §284.415 may be used)	☐	☐
5.	Were the drums or containers counted and verified against the manifest or shipping document?	☐	☐
6.	Have all of the drums or containers been properly secured so as to prevent load shift while in transit?	☐	☐
7.	Has the proper placarding been used on the transport vehicle?	☐	☐
8.	Has the manifest or shipping document been checked for accuracy against the waste being transported and properly signed by the generator and all applicable transporters?	☐	☐
9.	Does the shipping document designate an emergency response contact telephone number as required by 49 C.F.R. 172.604?	☐	☐
10.	Has ash residue from infectious or chemotherapeutic waste incineration been wetted immediately prior to loading?	☐	☐
11.	Does the vehicle contain a portable decontamination & spill containment unit (as listed in Appendix 1 of EWMI's SPPC Plan)?	☐	☐
12.	Are the only waste types on this load infectious or chemotherapeutic?	☐	☐
13.	Are all copies of the manifest legible?	☐	☐
