**RE: Renewal of Distribution and Marketing  
State Permit Number: DM 1902-K-03**

Dear Mr. Churchill:

On behalf of Kent County Levy Court, the Department of Public Works respectfully requests renewal of the Distribution and Marketing Permit #: DM 1902-K-03 for thermally treated sludge.

There is no update to the original Project Development Report. The original report details the methods used to produce the biosolids product, the vector control method, storage, and distribution markets.

There are no proposed changes to our Distribution and Marketing Permit at this time. An engineering firm is currently designing our new bio-solids processing facility, and all major equipment has been purchased for the Biosolids Capacity Expansion Project. Once the project is completed a new PDR will be done, and any potential changes will be outlined in a future D&M Permit application when necessary.

Sincerely,

Colby Harrington  
Assistant Director of Public Works
